SEARCH REQUEST FORM

Requester's Full Name: Celine Qian Examiner #: 78710 Date: 4/20/05

Art Unit: 1636 Phone Number: 2-0777 Serial Number: 09/939,209

Location (Bldg/Room#): 2A64 (Mailbox #): _____ Results Format Preferred (circle): PAPER DISK

****

To ensure an efficient and quality search, please attach a copy of the cover sheet, claims, and abstract or fill out the following:

Title of Invention: _____

Inventors (please provide full names): _____

_____

Earliest Priority Date: 8/24/2000

Search Topic:

Please provide a detailed statement of the search topic, and describe as specifically as possible the subject matter to be searched. Include the elected species or structures, keywords, synonyms, acronyms, and registry numbers, and combine with the concept or utility of the invention. Define any terms that may have a special meaning. Give examples or relevant citations, authors, etc., if known.

For Sequence Searches Only ***Please include all pertinent information (parent, child, divisional, or issued patent numbers) along with the appropriate serial number.***

            The library was characterised by oligonucleotide fingerprinting
            (ONFP) to reduce sequencing redundancy. According to the ONFP
            procedure, clones that display the same hybridisation matrix with a
            battery of 200 8mer oligonucleotides are grouped into clusters. One
            clone per ONFP cluster was selected for sequencing. cDNA clones and
            filters are distributed via Deutsches Ressourcenzentrum fuer
            Genomforschung GmbH (http://www.rzpd.de).

The library was characterised by oligonucleotide fingerprinting (ONFP) to reduce sequencing redundancy. According to the ONFP procedure, clones that display the same hybridisation matrix with a battery of 200 8mer oligonucleotides are grouped into clusters. One clone per ONFP cluster was selected for sequencing. cDNA clones and filters are distributed via Deutsches Ressourcenzentrum fuer Genomforschung GmbH (http://www.rzpd.de).

                     SfiI (ggccgcctcggcc); 5' and 3' adaptors were used in
                     cloning as follows: 5' adaptor sequence:
                     5'-CACGGCCATTATGGCC-3' and 3' adaptor sequence:
                     5'-ATTCTAGAGGCCGAGGCGGCCGACATG-dT(30)BN-3' (where B = A,
                     C, or G and N = A, C, G, or T). Average insert size 1.4 kb
                     (range 0.5-4.0 kb). 14/15 colonies contained inserts by
                     PCR. This library was enriched for full-length clones and
                     was constructed by Clontech Laboratories (Palo Alto, CA).
                     Note: this is a NIH_MGC Library."

            Suzuki,Y., Yoshitomo-Nakagawa,K., Maruyama,K., Suyama,A. and
            Sugano,S. Construction and characterization of a full
            length-enriched and a 5'-end-enriched cDNA library. Gene 200 (1-2),
            149-156 (1997)
             This clone was obtained from a 'full length-enriched' cDNA library
            constructed by 'Oligo-Capping' method. The coding region starts
            from the 50 bp upstream to the 3'-end.

                      /clone_lib="B2N807043"
                      /note="Organ: Brain; Vector: pCNS-D2; Site_1: EcoRI;
                      Site_2: NotI; The poly (A)+ RNA was dephosphorylated with
                      bacterial alkaline phosphatase (BAP) and then decapped
                      with tabacco acid pyrophosphatase (TAP). The decapped
                      intact mRNA was ligated with DNA-RNA linker including
                      EcoRI site by treatment of T4 RNA ligase and the first
                      strand cDNA was synthesized from oligo dT-selected mRNA by
                      priming with dT-tailed vector. The dT-tailed vector was
                      adjusted to have about 60nt. The cDNA vector was
                      circularized with E. coli DNA ligase after digestion of
                      EcoRI which site is also included in vector. An RNA strand
                      converted to a DNA strand by Okayama-Berg method. The
                      obtained cDNA vectors were used for transformation of
                      competent cells E. coli Top10F' by electroporation method.
                      The cDNA libraries constructed by this method are
                      full-length enriched cDNA library."

            Ingolstaedter Landstr.1, D-85764 Neuherberg, Germany
            This is the 5' sequence of the clone insert Clone from S. Wiemann,
            Molecular Genome Analysis, German Cancer Research Center (DKFZ);
            Email s.wiemann@dkfz-heidelberg.de; sequenced by BMFZ (Biomedical
            Research Center at the Heinrich-Heine-University,
            Duesseldorf/Germany) within the cDNA sequencing consortium of the
            German Genome Project. This clone (DKFZp459H1818) is available at
            the RZPD in Berlin. Please contact the RZPD: Ressourcenzentrum,
            Heubnerweg 6, 14059 Berlin-Charlottenburg, GERMANY; Email:
            clone@rzpd.de Further information about the clone and the
            sequencing project is available at
            http://mips.gsf.de/projects/cdna/.

LOCUS       AL583850              165329 bp    DNA     linear   PRI 15-NOV-2001
DEFINITION  Human DNA sequence from clone RP11-430G6 on chromosome 1, complete
            sequence.
ACCESSION   AL583850
VERSION     AL583850.5  GI:16973044
KEYWORDS    HTG.
SOURCE      Homo sapiens (human)
  ORGANISM  Homo sapiens
            Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;
            Mammalia; Eutheria; Primates; Catarrhini; Hominidae; Homo.
REFERENCE   1  (bases 1 to 165329)
  AUTHORS   Tracey,A.
  TITLE     Direct Submission
  JOURNAL   Submitted (15-NOV-2001) Wellcome Trust Sanger Institute, Hinxton,
            Cambridgeshire, CB10 1SA, UK. E-mail enquiries:
            humquery@sanger.ac.uk Clone requests: clonerequest@sanger.ac.uk
COMMENT     On Nov 16, 2001 this sequence version replaced gi:15020514.
            During sequence assembly data is compared from overlapping clones.
            Where differences are found these are annotated as variations
            together with a note of the overlapping clone name. Note that the
            variation annotation may not be found in the sequence submission
            corresponding to the overlapping clone, as we submit sequences with
            only a small overlap as described above.
            This sequence was finished as follows unless otherwise noted: all
            regions were either double-stranded or sequenced with an alternate
            chemistry or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by at least
            one plasmid subclone or more than one M13 subclone; and the
            assembly was confirmed by restriction digest. The following
            abbreviations are used to associate primary accession numbers given
            in the feature table with their source databases: Em:, EMBL; Sw:,
            SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information on the WORMPEP
            database can be found at
            http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence
            was generated from part of bacterial clone contigs of human
            chromosome 1, constructed by the Sanger Centre Chromosome 1 Mapping
            Group.  Further information can be found at
            http://www.sanger.ac.uk/HGP/Chr1
```

RP11-430G6 is from the library RPCI-11.2 constructed by the group of Pieter de Jong. For further details see http://www.chori.org/bacpac/home.htm
VECTOR: pBACe3.6
IMPORTANT: This sequence is not the entire insert of clone RP11-430G6 It may be shorter because we sequence overlapping sections only once, except for a short overlap.
The true right end of clone RP11-430G6 is at 165329 in this sequence. The true right end of clone RP11-331H2 is at 2000 in this sequence.

  TITLE     Direct Submission
  JOURNAL   Submitted (03-APR-2000) DNA Sequencing and Technology Center,
            Stanford University, 855 California Avenue, Palo Alto, CA 94304,
            USA
COMMENT     On Mar 4, 2001 this sequence version replaced gi:9665085.
            -------------- Genome Center
                 Center: Stanford DNA Sequencing and Technology Development
            Center
                 Center code: SDSTDC
                 Web site: http://sequence-www.stanford.edu/group/human/
                 Contact: hum-info@sequence.stanford.edu
            -------------- Project Information
                 Center project name: 880
                 Center clone name: RP11-288O18
            -------------- Summary Statistics
                 Sequencing Vector: M13mp18; X02513; 100% of reads
                 Sequencing Vector: plasmid; plasmid_accession; 0% of reads
                 Chemistry: Dye-primer; 1% of reads
                 Chemistry: Dye-terminator Big Dye; 99% of reads
                 Assembly program: Phrap; version 0.990319
                 Consensus quality: 190680 bases at least Q40
                 Consensus quality: 191287 bases at least Q30
                 Consensus quality: 191336 bases at least Q20
                 Insert size: 195548; agarose-fp
                 Insert size: 191499; sum-of-contigs
                 Quality coverage:  7.9x in Q20 bases; agarose-fp
                 Quality coverage:  8.1x in Q20 bases; sum-of-contigs.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 3 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *       1    12646: contig of 12646 bp in length
            *   12647    12746: gap of unknown length
            *   12747    94961: contig of 82215 bp in length
            *   94962    95061: gap of unknown length

  TITLE     Direct Submission
  JOURNAL   Submitted (09-NOV-2002) Human Genome Sequencing Center, Department
            of Molecular and Human Genetics, Baylor College of Medicine, One
            Baylor Plaza, Houston, TX 77030, USA
COMMENT     On Nov 9, 2002 this sequence version replaced gi:23096552.
            The sequence in this assembly is a combination of BAC based reads
            and whole genome shotgun sequencing reads assembled using Atlas
            (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
            in the feature table below represents a scaffold in the Atlas
            assembly (a 'contig-scaffold'). Within each contig-scaffold,
            individual sequence contigs are ordered and oriented, and separated
            by sized gaps filled with Ns to the estimated size. The sequence
            may extend beyond the ends of the clone and there may be sequence
            contigs within a contig-scaffold that consist entirely of whole
            genome shotgun sequence reads. Both end sequences and whole genome
            shotgun sequence only contigs will be indicated in the feature
            table.

          ------------- Project Information
            Center project name: GDBK
            Center clone name: CH230-9B12
          ------------- Summary Statistics
            Assembly program: Phrap; version 0.990329
            Consensus quality: 228152 bases at least Q40
            Consensus quality: 230310 bases at least Q30
            Consensus quality: 231872 bases at least Q20
            Estimated insert size: 235029; sum-of-contigs estimation
            Quality coverage: 7x in Q20 bases; sum-of-contigs estimation
          -------------
          * NOTE: Estimated insert size may differ from sequence length
          *   (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
          * NOTE: This is a 'working draft' sequence. It currently
          * consists of 4 contigs. The true order of the pieces
          * is not known and their order in this sequence record is
          * arbitrary. Gaps between the contigs are represented as
          * runs of N, but the exact sizes of the gaps are unknown.
          * This record will be updated with the finished sequence
          * as soon as it is available and the accession number will
          * be preserved.
          *       1   192878: contig of 192878 bp in length
          *  192879   192978: gap of unknown length
          *  192979   270295: contig of 77317 bp in length
          *  270296   270395: gap of unknown length
          *  270396   272405: contig of 2010 bp in length
          *  272406   272505: gap of unknown length
          *  272506   275631: contig of 3126 bp in length.

COMMENT     On May 28, 1999 this sequence version replaced gi:4884002.
            INFORMATION: http://www.hgsc.bcm.tmc.edu/ or email
            gc-help@bcm.tmc.edu

            CLONE LENGTH: This sequence does not necessarily represent the
            entire insert of this clone. Overlapping regions of clones are only
            sequenced and submitted once, so the sequence for the remainder of
            the insert may be found in the record for the adjacent clones.
            Overlapping clones are noted at the beginning and end of the
            Features listing.

            ANNOTATION OF FEATURES:
               STSs are identified using ePCR (Genome Res. 7:541-550) searches
            of a local database that includes entries from dbSTS, GDB, and
            local mapping efforts.
               Repeats are identified using RepeatMasker (A. Smit and P. Green,
            unpublished.) for Human and Mouse sequences.
               Genes and Region of sequence similarity are identified by BLAST
            (Nuc. Acids Res. 25:3389-3402) similarity (expect < 1e-34) to the
            EST and cDNA sequences. Genes demonstrate at least two exons
            flanked by consensus splice sites that maintained sequence
            continuity across the splice junctions. Sequences that are not
            identical matches are annotated as similar.

            SEQUENCING READ COVERAGE:Sequencing is completed to a minimum
            standard of double strand coverage with a minimum of 2 clones and 2
            reads with no ambiguities or 2 chemistries with a minimum of 2
            clones and 3 reads with no ambiguities. If the sequence quality for
            a region does not meet this standard, it will be indicated in the
            annotation as Low Coverage.

            QUALITY OF INDIVIDUAL BASES:This sequence meets stringent quality
            standards - estimated error rate less than 1 per 10,000 bases.
            Reports of lowest quality individual bases and measures of base
            quality are listed below. Description of the metrics can be found
            at URL:
            http://gc.bcm.tmc.edu:8088/quality.info/genbank.annotation.html.

COMMENT     On Sep 28, 2002 this sequence version replaced gi:22297319.
            INFORMATION: http://www.hgsc.bcm.tmc.edu/ or email
            gc-help@bcm.tmc.edu

            CLONE LENGTH: This sequence does not necessarily represent the
            entire insert of this clone. Overlapping regions of clones are only
            sequenced and submitted once, so the sequence for the remainder of
            the insert may be found in the record for the adjacent clones.
            Overlapping clones are noted at the beginning and end of the
            Features listing.

            ANNOTATION OF FEATURES:
               STSs are identified using ePCR (Genome Res. 7:541-550) searches
            of a local database that includes entries from dbSTS, GDB, and
            local mapping efforts.
               Repeats are identified using RepeatMasker (A. Smit and P. Green,
            unpublished.) for Human and Mouse sequences.
               Genes and Region of sequence similarity are identified by BLAST
            (Nuc. Acids Res. 25:3389-3402) similarity (expect < 1e-34) to the
            EST and cDNA sequences. Genes demonstrate at least two exons
            flanked by consensus splice sites that maintained sequence
            continuity across the splice junctions. Sequences that are not
            identical matches are annotated as similar.

            SEQUENCING READ COVERAGE:Sequencing is completed to a minimum
            standard of double strand coverage with a minimum of 2 clones and 2
            reads with no ambiguities or 2 chemistries with a minimum of 2
            clones and 3 reads with no ambiguities. If the sequence quality for
            a region does not meet this standard, it will be indicated in the
            annotation as Low Coverage.

            QUALITY OF INDIVIDUAL BASES:This sequence meets stringent quality
            standards - estimated error rate less than 1 per 10,000 bases.
            Reports of lowest quality individual bases and measures of base
            quality are listed below. Description of the metrics can be found
            at URL:
            http://www.hgsc.bcm.tmc.edu:8088/quality.info/genbank.annotation.ht
            ml.

RESULT 10
AC018694
LOCUS AC018694 196832 bp DNA linear PRI 09-MAY-2001
DEFINITION Homo sapiens BAC clone RP11-563P16 from 11, complete sequence.
ACCESSION AC018694
VERSION AC018694.4 GI:9665213
KEYWORDS HTG.
SOURCE Homo sapiens (human)
ORGANISM Homo sapiens
Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Mammalia; Eutheria; Primates; Catarrhini; Hominidae; Homo.
REFERENCE 1 (bases 1 to 196832)
AUTHORS Sulston,J.E. and Waterston,R.
TITLE Toward a complete human genome sequence
JOURNAL Genome Res. 8 (11), 1097-1108 (1998)

AUTHORS Waterston,R.H.
TITLE Direct Submission
JOURNAL Submitted (10-SEP-2000) Genome Sequencing Center, Washington University School of Medicine, 4444 Forest Park Parkway, St. Louis, MO 63108, USA
REFERENCE 6 (bases 1 to 196832)
AUTHORS Waterston,R.
TITLE Direct Submission
JOURNAL Submitted (08-NOV-2000) Department of Genetics, Washington University, 4444 Forest Park Avenue, St. Louis, Missouri 63108, USA
REFERENCE 7 (bases 1 to 196832)
AUTHORS Waterston,R.
TITLE Direct Submission
JOURNAL Submitted (09-MAY-2001) Department of Genetics, Washington University, 4444 Forest Park Avenue, St. Louis, Missouri 63108, USA
COMMENT On Aug 3, 2000 this sequence version replaced gi:7631073.
---------- Genome Center
Center: Washington University Genome Sequencing Center
Center code: WUGSC
Web site: http://genome.wustl.edu/gsc
Contact: sapiens@watson.wustl.edu
---------- Summary Statistics
Center project name: H_NH0563P16
----------.

NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.

This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by restriction digest.

MAPPING INFORMATION:
Mapping information for this clone was provided by Dr. John D. McPherson, Department of Genetics, Washington University, St. Louis MO. For additional information about the map position of this sequence, see http://genome.wustl.edu/gsc

SOURCE INFORMATION:
The RPCI-11 human BAC library was made from the blood of one male donor, as described by Osoegawa,K., Woon,P.Y., Zhao,B., Frengen,E., Tateno,M., Catanese,J.J. and de Jong,P.J. (1998) An improved approach for construction of bacterial artificial chromosome libraries. Genomics 51:1-8. The clone may be obtained either from Research Genetics, Inc. (http://www.resgen.com) or Pieter de Jong and coworkers at the Roswell Park Cancer Institute (http://bacpac.med.buffalo.edu)
VECTOR: pBACe3.6
NEIGHBORING SEQUENCE INFORMATION:
The clone sequenced to the left is RP11-484L12. The clone sequenced to the right is RP11-652L13. Actual start of this clone is at base position 1 of RP11-563P16; actual end is at base position 196832 of RP11-563P16.

The region from base position 99028 to 99031 is covered by a single m13 subclone.
FEATURES Location/Qualifiers

                Center project name: L2148
                Center clone name: 76_K_11
            -------------- Summary Statistics
                Sequencing vector: Plasmid; n/a; 100% of reads
                Chemistry: Dye-terminator Big Dye; 100% of reads
                Assembly program: Phrap; version 0.960731
                Consensus quality: 169932 bases at least Q40
                Consensus quality: 173382 bases at least Q30
                Consensus quality: 174685 bases at least Q20
                Insert size: 182000; agarose-fp
                Insert size: 175673; sum-of-contigs
                Quality coverage: 5.4 in Q20 bases; agarose-fp
                Quality coverage: 5.6 in Q20 bases; sum-of-contigs
            --------------.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 12 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *      1    18082: contig of 18082 bp in length
            *  18083    18182: gap of 100 bp
            *  18183    19240: contig of 1058 bp in length
            *  19241    19340: gap of 100 bp
            *  19341    69145: contig of 49805 bp in length
            *  69146    69245: gap of 100 bp
            *  69246    71797: contig of 2552 bp in length
            *  71798    71897: gap of 100 bp
            *  71898    76451: contig of 4554 bp in length
            *  76452    76551: gap of 100 bp
            *  76552    84099: contig of 7548 bp in length
            *  84100    84199: gap of 100 bp
            *  84200    94128: contig of 9929 bp in length
            *  94129    94228: gap of 100 bp
            *  94229   102601: contig of 8373 bp in length
            * 102602   102701: gap of 100 bp
            * 102702   115119: contig of 12418 bp in length
            * 115120   115219: gap of 100 bp
            * 115220   136142: contig of 20923 bp in length
            * 136143   136242: gap of 100 bp
            * 136243   175508: contig of 39266 bp in length
            * 175509   175608: gap of 100 bp
            * 175609   176773: contig of 1165 bp in length.

            humquery@sanger.ac.uk Clone requests: clonerequest@sanger.ac.uk
COMMENT     On Jun 13, 2002 this sequence version replaced gi:18873617.
            During sequence assembly data is compared from overlapping clones.
            Where differences are found these are annotated as variations
            together with a note of the overlapping clone name. Note that the
            variation annotation may not be found in the sequence submission
            corresponding to the overlapping clone, as we submit sequences with
            only a small overlap as described above.
            This sequence was finished as follows unless otherwise noted: all
            regions were either double-stranded or sequenced with an alternate
            chemistry or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by at least
            one plasmid subclone or more than one M13 subclone; and the
            assembly was confirmed by restriction digest. The following
            abbreviations are used to associate primary accession numbers given
            in the feature table with their source databases: Em:, EMBL; Sw:,
            SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information on the WORMPEP
            database can be found at
            http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence
            was generated from part of bacterial clone contigs of human
            chromosome 1, constructed by the Sanger Centre Chromosome 1 Mapping
            Group.  Further information can be found at
            http://www.sanger.ac.uk/HGP/Chr1
            RP11-518D3 is from the library RPCI-11.2 constructed by the group
            of Pieter de Jong. For further details see

                Center clone name: 297_I_14
            -------------- Summary Statistics
                Sequencing vector: M13; M77815; 100% of reads
                Chemistry: Dye-terminator Big Dye; 100% of reads
                Assembly program: Phrap; version 0.960731
                Consensus quality: 174800 bases at least Q40
                Consensus quality: 178733 bases at least Q30
                Consensus quality: 179947 bases at least Q20
                Insert size: 182000; agarose-fp
                Insert size: 181249; sum-of-contigs
                Quality coverage: 4.8 in Q20 bases; agarose-fp
                Quality coverage: 4.8 in Q20 bases; sum-of-contigs
            --------------.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 9 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *        1     4146: contig of 4146 bp in length
            *     4147     4246: gap of 100 bp
            *     4247     9349: contig of 5103 bp in length
            *     9350     9449: gap of 100 bp
            *     9450    19658: contig of 10209 bp in length
            *    19659    19758: gap of 100 bp
            *    19759    27772: contig of 8014 bp in length
            *    27773    27872: gap of 100 bp
            *    27873    47101: contig of 19229 bp in length
            *    47102    47201: gap of 100 bp
            *    47202    74998: contig of 27797 bp in length

                Quality coverage: 5.2 in Q20 bases; sum-of-contigs
            --------------.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 13 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.

  TITLE     Direct Submission
  JOURNAL   Submitted (04-SEP-2001) Sanger Centre, Hinxton, Cambridgeshire,
            CB10 1SA, UK. E-mail enquiries: humquery@sanger.ac.uk Clone
            requests: clonerequest@sanger.ac.uk
COMMENT     On Sep 6, 2001 this sequence version replaced gi:14800199.
            During sequence assembly data is compared from overlapping clones.
            Where differences are found these are annotated as variations
            together with a note of the overlapping clone name. Note that the
            variation annotation may not be found in the sequence submission
            corresponding to the overlapping clone, as we submit sequences with
            only a small overlap as described above.
            This sequence was finished as follows unless otherwise noted: all
            regions were either double-stranded or sequenced with an alternate
            chemistry or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by at least
            one plasmid subclone or more than one M13 subclone; and the
            assembly was confirmed by restriction digest. The following
            abbreviations are used to associate primary accession numbers given
            in the feature table with their source databases: Em:, EMBL; Sw:,
            SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information on the WORMPEP
            database can be found at
            http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence
            was generated from part of bacterial clone contigs of human
            chromosome 6, constructed by the Sanger Centre Chromosome 6 Mapping
            Group.  Further information can be found at
            http://www.sanger.ac.uk/HGP/Chr6
            RP11-552E20 is from the library RPCI-11.2 constructed by the group
            of Pieter de Jong. For further details see
            http://www.chori.org/bacpac/home.htm
            VECTOR: pBACe3.6
            This sequence is the entire insert of clone RP11-552E20 The true
            left end of clone RP11-535K1 is at 161600 in this sequence. The
            true right end of clone RP11-200E19 is at 35574 in this sequence.

COMMENT
            ---------------- Genome Center ----------------
            Center: Washington University Genome Sequencing Center
            Center code: WUGSC
            Web site:http://genome.wustl.edu/gsc/index.shtml
            -------------- Project Information --------------
            Center project name: H_NH0200E19
            -------------- Summary Statistics  --------------
            Sequencing vector: M13; 100%
            Sequencing vector: plasmid; 0%
            Chemistry: Dye-primer ET; 100% of reads
            Chemistry: Dye-terminator Big Dye; 0% of reads
            Assembly program: Phrap; version 0.990319
            Consensus quality: 150411 bases at least Q40
            Consensus quality: 153191 bases at least Q30
            Consensus quality: 154640 bases at least Q20
            Insert size: 141000; agarose-fp
            Insert size: 157483; sum-of-contigs
            Quality coverage: 4.79 in Q20 bases; agarose-fp
            Quality coverage: 4.34 in Q20 bases; sum-of-contigs
            ------------------------------------------------.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 16 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *        1     2233: contig of 2233 bp in length
            *     2234     2333: gap of unknown length
            *     2334     5177: contig of 2844 bp in length
            *     5178     5277: gap of unknown length
            *     5278     9015: contig of 3738 bp in length
            *     9016     9115: gap of unknown length
            *     9116    13714: contig of 4599 bp in length
            *    13715    13814: gap of unknown length
            *    13815    18427: contig of 4613 bp in length
            *    18428    18527: gap of unknown length
            *    18528    22634: contig of 4107 bp in length
            *    22635    22734: gap of unknown length
            *    22735    29174: contig of 6440 bp in length
            *    29175    29274: gap of unknown length
            *    29275    35652: contig of 6378 bp in length
            *    35653    35752: gap of unknown length
            *    35753    42585: contig of 6833 bp in length

TITLE Direct Submission
JOURNAL Submitted (07-MAY-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA
COMMENT On May 7, 2002 this sequence version replaced gi:20336722.
INFORMATION: http://www.hgsc.bcm.tmc.edu/ or email gc-help@bcm.tmc.edu

CLONE LENGTH: This sequence does not necessarily represent the entire insert of this clone. Overlapping regions of clones are only sequenced and submitted once, so the sequence for the remainder of the insert may be found in the record for the adjacent clones. Overlapping clones are noted at the beginning and end of the Features listing.

ANNOTATION OF FEATURES:
STSs are identified using ePCR (Genome Res. 7:541-550) searches of a local database that includes entries from dbSTS, GDB, and local mapping efforts.
Repeats are identified using RepeatMasker (A. Smit and P. Green, unpublished.) for Human and Mouse sequences.
Genes and Region of sequence similarity are identified by BLAST (Nuc. Acids Res. 25:3389-3402) similarity (expect < 1e-34) to the EST and cDNA sequences. Genes demonstrate at least two exons flanked by consensus splice sites that maintained sequence continuity across the splice junctions. Sequences that are not identical matches are annotated as similar.

SEQUENCING READ COVERAGE:Sequencing is completed to a minimum standard of double strand coverage with a minimum of 2 clones and 2 reads with no ambiguities or 2 chemistries with a minimum of 2 clones and 3 reads with no ambiguities. If the sequence quality for a region does not meet this standard, it will be indicated in the annotation as Low Coverage.

QUALITY OF INDIVIDUAL BASES:This sequence meets stringent quality standards - estimated error rate less than 1 per 10,000 bases. Reports of lowest quality individual bases and measures of base quality are listed below. Description of the metrics can be found at URL:
http://gc.bcm.tmc.edu:8088/quality.info/genbank.annotation.html.

            CB10 1SA, UK. E-mail enquiries: humquery@sanger.ac.uk Clone
            requests: clonerequest@sanger.ac.uk
COMMENT     On Sep 12, 2001 this sequence version replaced gi:14272321.
            During sequence assembly data is compared from overlapping clones.
            Where differences are found these are annotated as variations
            together with a note of the overlapping clone name. Note that the
            variation annotation may not be found in the sequence submission
            corresponding to the overlapping clone, as we submit sequences with
            only a small overlap as described above.
            This sequence was finished as follows unless otherwise noted: all
            regions were either double-stranded or sequenced with an alternate
            chemistry or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by at least
            one plasmid subclone or more than one M13 subclone; and the
            assembly was confirmed by restriction digest. The following
            abbreviations are used to associate primary accession numbers given
            in the feature table with their source databases: Em:, EMBL; Sw:,
            SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information on the WORMPEP
            database can be found at
            http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence
            was generated from part of bacterial clone contigs of human
            chromosome 9, constructed by the Sanger Centre Chromosome 9 Mapping
            Group.  Further information can be found at
            http://www.sanger.ac.uk/HGP/Chr9
            RP11-567E16 is from the library RPCI-11.2 constructed by the group
            of Pieter de Jong. For further details see
            http://www.chori.org/bacpac/home.htm
            VECTOR: pBACe3.6
            IMPORTANT: This sequence is not the entire insert of clone
            RP11-567E16 It may be shorter because we sequence overlapping
            sections only once, except for a short overlap.
            The true left end of clone RP11-375O18 is at 65509 in this
            sequence. The true right end of clone RP11-159N19 is at 100 in this
            sequence.

            if library name is LB1 to LB4, please see website
            for a description: http://www-gsd.lbl.gov/cheng/BAC.html
            Summary Statistics:
            Sequencing vector: Plasmid; pUC18
            Chemistry: Dye-terminator Big Dye
            Assembly program: Phrap version 0.990329.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 13 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *        1     2537: contig of 2537 bp in length
            *     2538     2637: gap of unknown length
            *     2638     6734: contig of 4097 bp in length
            *     6735     6834: gap of unknown length
            *     6835    14153: contig of 7319 bp in length
            *    14154    14253: gap of unknown length
            *    14254    21025: contig of 6772 bp in length
            *    21026    21125: gap of unknown length

COMMENT     On Oct 6, 1998 this sequence version replaced gi:3646075.
            -------------- Genome Center
            Center: Wellcome Trust Sanger Institute
            Center code: SC
            Web site: http://www.sanger.ac.uk
            Contact: humquery@sanger.ac.uk
            --------------
            During sequence assembly data is compared from overlapping clones.
            Where differences are found these are annotated as variations
            together with a note of the overlapping clone name. Note that the
            variation annotation may not be found in the sequence submission
            corresponding to the overlapping clone, as we submit sequences with
            only a small overlap as described above.
            This sequence was finished as follows unless otherwise noted: all
            regions were either double-stranded or sequenced with an alternate
            chemistry or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by at least
            one plasmid subclone or more than one M13 subclone; and the
            assembly was confirmed by restriction digest, except on the rare
            occasion of the clone being a YAC.
            The following abbreviations are used to associate primary accession
            numbers given in the feature table with their source databases:
            Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information
            on the WORMPEP database can be found at
            http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence
            was generated from part of bacterial clone contigs of human
            chromosome 6, constructed by the Sanger Centre Chromosome 6 Mapping
            Group.  Further information can be found at
            http://www.sanger.ac.uk/HGP/Chr6
            RP3-372K1 is from the library RPCI-3 constructed by the group of
            Pieter de Jong. For further details see
            http://www.chori.org/bacpac/home.htm
            VECTOR: pCYPAC2.

COMMENT     On Sep 19, 2000 this sequence version replaced gi:9966020.
            INFORMATION: http://www.hgsc.bcm.tmc.edu/ or email
            gc-help@bcm.tmc.edu

            CLONE LENGTH: This sequence does not necessarily represent the
            entire insert of this clone. Overlapping regions of clones are only
            sequenced and submitted once, so the sequence for the remainder of
            the insert may be found in the record for the adjacent clones.
            Overlapping clones are noted at the beginning and end of the
            Features listing.

            ANNOTATION OF FEATURES:
               STSs are identified using ePCR (Genome Res. 7:541-550) searches
            of a local database that includes entries from dbSTS, GDB, and
            local mapping efforts.
               Repeats are identified using RepeatMasker (A. Smit and P. Green,
            unpublished.) for Human and Mouse sequences.
               Genes and Region of sequence similarity are identified by BLAST
            (Nuc. Acids Res. 25:3389-3402) similarity (expect < 1e-34) to the
            EST and cDNA sequences. Genes demonstrate at least two exons
            flanked by consensus splice sites that maintained sequence
            continuity across the splice junctions. Sequences that are not
            identical matches are annotated as similar.

            SEQUENCING READ COVERAGE:Sequencing is completed to a minimum
            standard of double strand coverage with a minimum of 2 clones and 2
            reads with no ambiguities or 2 chemistries with a minimum of 2
            clones and 3 reads with no ambiguities. If the sequence quality for
            a region does not meet this standard, it will be indicated in the
            annotation as Low Coverage.

            QUALITY OF INDIVIDUAL BASES:This sequence meets stringent quality
            standards - estimated error rate less than 1 per 10,000 bases.
```

Reports of lowest quality individual bases and measures of base quality are listed below. Description of the metrics can be found at URL:
http://gc.bcm.tmc.edu:8088/quality.info/genbank.annotation.html.

  TITLE     Direct Submission
  JOURNAL   Submitted (03-APR-2003) Wellcome Trust Sanger Institute, Hinxton,
            Cambridgeshire, CB10 1SA, UK. E-mail enquiries:
            humquery@sanger.ac.uk Clone requests: clonerequest@sanger.ac.uk
COMMENT     On Apr 3, 2003 this sequence version replaced gi:28881719.
            -------------- Genome Center
            Center: Wellcome Trust Sanger Institute
            Center code: SC
            Web site: http://www.sanger.ac.uk
            Contact: humquery@sanger.ac.uk
            --------------
            During sequence assembly data is compared from overlapping clones.
            Where differences are found these are annotated as variations
            together with a note of the overlapping clone name. Note that the
            variation annotation may not be found in the sequence submission
            corresponding to the overlapping clone, as we submit sequences with
            only a small overlap as described above.
            This sequence was finished as follows unless otherwise noted: all
            regions were either double-stranded or sequenced with an alternate
            chemistry or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by at least
            one plasmid subclone or more than one M13 subclone; and the
            assembly was confirmed by restriction digest, except on the rare
            occasion of the clone being a YAC.
            The following abbreviations are used to associate primary accession
            numbers given in the feature table with their source databases:
            Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information
            on the WORMPEP database can be found at
            http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence
            was generated from part of bacterial clone contigs of human
            chromosome 1, constructed by the Sanger Centre Chromosome 1 Mapping
            Group.  Further information can be found at
            http://www.sanger.ac.uk/HGP/Chr1
            RP4-740O15 is from the library RPCI-4 constructed by the group of
            Pieter de Jong. For further details see
            http://www.chori.org/bacpac/home.htm
            VECTOR: pCYPAC2.

  TITLE     Direct Submission
  JOURNAL   Submitted (03-JUL-2001) Sanger Centre, Hinxton, Cambridgeshire,
            CB10 1SA, UK. E-mail enquiries: humquery@sanger.ac.uk Clone
            requests: clonerequest@sanger.ac.uk
COMMENT     On Jul 4, 2001 this sequence version replaced gi:14455961.
            During sequence assembly data is compared from overlapping clones.
            Where differences are found these are annotated as variations
            together with a note of the overlapping clone name. Note that the
            variation annotation may not be found in the sequence submission
            corresponding to the overlapping clone, as we submit sequences with
            only a small overlap as described above.
            This sequence was finished as follows unless otherwise noted: all
            regions were either double-stranded or sequenced with an alternate
            chemistry or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by at least
            one plasmid subclone or more than one M13 subclone; and the
            assembly was confirmed by restriction digest. The following
            abbreviations are used to associate primary accession numbers given
            in the feature table with their source databases: Em:, EMBL; Sw:,
            SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information on the WORMPEP
            database can be found at
            http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence
            was generated from part of bacterial clone contigs of human
            chromosome 6, constructed by the Sanger Centre Chromosome 6 Mapping
            Group.  Further information can be found at
            http://www.sanger.ac.uk/HGP/Chr6
            RP11-453D21 is from the library RPCI-11.2 constructed by the group
            of Pieter de Jong. For further details see
            http://www.chori.org/bacpac/home.htm
            VECTOR: pBACe3.6
            IMPORTANT: This sequence is not the entire insert of clone
            RP11-453D21 It may be shorter because we sequence overlapping
            sections only once, except for a 100 base overlap.
            The true left end of clone RP1-249N8 is at 102012 in this sequence.
            The true right end of clone RP3-492L20 is at 2000 in this sequence.

------------- Project Information
    Center project name: HumDraft11
    Center clone name: RP11-96N14
------------- Summary Statistics
    Sequencing vector: PCR products; 100% of reads
    Chemistry: Dye-terminator ET-amersham; 100% of reads
    Assembly program: Phrap; version 0.990329
    Consensus quality: 153477 bases at least Q40
    Consensus quality: 156297 bases at least Q30
    Consensus quality: 157655 bases at least Q20
    Insert size: 158800; sum-of-contigs
    Quality coverage: 6.37x in Q20 bases; sum-of-contigs
-------------.
NOTE: This is a 'working draft' sequence. It currently consists of
21 contigs. The true order of the pieces is not known and their
order in this sequence record is arbitrary. Gaps between the
contigs are represented as runs N, but the exact sizes of the gaps
are unknown. This record will be updated with the finished sequence
as soon as it is available and the accession number will be
preserved
         1     25551 contig of  25551 bp in length
     25652     39527 contig of  13876 bp in length
     39628     54679 contig of  15052 bp in length
     54780     66520 contig of  11741 bp in length
     66621     79378 contig of  12758 bp in length
     79479     89839 contig of  10361 bp in length
     89940     99761 contig of   9822 bp in length
     99862    107801 contig of   7940 bp in length
    107902    114450 contig of   6549 bp in length
    114551    121525 contig of   6975 bp in length
    121626    127312 contig of   5687 bp in length
    127413    132396 contig of   4984 bp in length
    132497    137634 contig of   5138 bp in length
    137735    141989 contig of   4255 bp in length
    142090    146645 contig of   4556 bp in length
    146746    150112 contig of   3367 bp in length
    150213    153851 contig of   3639 bp in length
    153952    156227 contig of   2276 bp in length
    156328    158363 contig of   2036 bp in length
    158464    159557 contig of   1094 bp in length
    159658    160800 contig of   1143 bp in length
Sequence updated (26-May-2000).
* NOTE: This is a 'working draft' sequence. It currently
* consists of 21 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence

            Center clone name: RP11-812L16
          -------------- Summary Statistics
            Sequencing vector: PCR products; 100% of reads
            Chemistry: Dye-terminator ET-amersham; 100% of reads
            Assembly program: Phrap; version 0.990329
            Consensus quality: 148478 bases at least Q40
            Consensus quality: 155428 bases at least Q30
            Consensus quality: 158571 bases at least Q20
            Insert size: 160384; sum-of-contigs
            Quality coverage: 4.77x in Q20 bases; sum-of-contigs
          --------------.
          NOTE: This is a 'working draft' sequence. It currently consists of
          23 contigs. The true order of the pieces is not known and their
          order in this sequence record is arbitrary. Gaps between the
          contigs are represented as runs N, but the exact sizes of the gaps
          are unknown. This record will be updated with the finished sequence
          as soon as it is available and the accession number will be
          preserved
                1     19158 contig of  19158 bp in length
            19259     35737 contig of  16479 bp in length
            35838     46375 contig of  10538 bp in length
            46476     57728 contig of  11253 bp in length

            ----------------------------------------------------.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 4 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *       1    30414: contig of 30414 bp in length
            *   30415    30514: gap of unknown length
            *   30515    74774: contig of 44260 bp in length
            *   74775    74874: gap of unknown length
            *   74875   126758: contig of 51884 bp in length
            *  126759   126858: gap of unknown length
            *  126859   183674: contig of 56816 bp in length.

---------- Project Information
Center project name:The Chimpanzee Chromosome 22 Sequencing Project
Center clone name: PTB-005J02
---------- Summary Statistics
Sequencing vector: pUC18,pUC13,pTZ19R; 100% of reads Chemistry: Dye-terminator Big Dye and ET; 100% of reads Assembly program: Phrap; version 0.990329
Consensus quality: 138,380 bases at least Q40
Consensus quality: 3,766 bases at least Q30
Consensus quality: 375 bases at least Q20

This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30);
an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at one plasmid
subclone or more than one M13 subclone;
and the assembly was confirmed by restriction digest.

Source information:
The RPCI-43 chimpanzee BAC library was prepared from DNA isolated from the blood of a single male chimpanzee using published protocols (Osoegawa,K. et al. Genomics 52:1-8). The DNA from the chimpanzee ('Clint') was obtained from the Yerkes Primate Center in Atlanta. The library was prepared by Baoli Zhu, Chung Li Shu, Kazutoyo Osoegawa, Evan Eichler & Pieter J de Jong. The library characteristics are described at
http://www.chori.org/bacpac/mchimp43.htm.
The clone may be obtained from Pieter J. de Jong and coworkers (http://www.chori.org/bacpac).
VECTOR: pBACe3.6
The CHORI-251 chimpanzee BAC library was prepared from DNA isolated from the blood of a single male chimpanzee using published protocols (Osoegawa,K. et al. Genomics 52:1-8). The DNA from the chimpanzee ('Clint') was obtained from the Yerkes Primate Center in Atlanta. The library was prepared by Baoli Zhu, Chung Li Shu, Kazutoyo Osoegawa, Evan Eichler & Pieter J de Jong. The library characteristics are described at
http://www.chori.org/bacpac/chimpanzee251.htm.
The clone may be obtained from Pieter J. de Jong and coworkers (http://www.chori.org/bacpac).
VECTOR: pTARBAC2.1
The PTB1 chimpanzee BAC library was prepared from DNA isolated from cultured cells established from the blood of a single male chimpanzee.
Clones may be obtained from Asao Fujiyama and co-workers (http://www.gsc.riken.go.jp).
VECTOR: pKS145
The PTF22 chimpanzee Fosmid library was prepared from DNA isolated from cultured cells established from the blood of a single male chimpanzee.
Clones may be obtained from Asao Fujiyama and co-workers (http://www.gsc.riken.go.jp).
VECTOR: pKS143

Sequence Quality Assessment:
This entry has been annotated with sequence estimates computed by the Phrap assembly program.
All manually edited bases have been reduced to quality zero.
Quality levels above 40 are expected to have less than 1 error in 10,000 bp.

Neighboring clones: PTB-003F15(left) and CH251-530H12(right).

  JOURNAL   Submitted (08-JAN-2003) Human Genome Sequencing Center, Department
            of Molecular and Human Genetics, Baylor College of Medicine, One
            Baylor Plaza, Houston, TX 77030, USA
COMMENT     On Apr 28, 2002 this sequence version replaced gi:11995513.
            -------------- Genome Center
                Center: Baylor College of Medicine
                Center code: BCM
                Web site: http://www.hgsc.bcm.tmc.edu/
                Contact: hgsc-help@bcm.tmc.edu
            -------------- Project Information
                Center project name: HBEW
                Center clone name: RP11-817L6
            -------------- Summary Statistics
                Sequencing vector: M13;
                Chemistry: Dye-primer Bodipy: 50% of reads
                Chemistry: Dye-terminator Big Dye: 50% of reads
                Assembly program: Phrap; version 0.990329
                Consensus quality: 162060 bases at least Q40
                Consensus quality: 165789 bases at least Q30
                Consensus quality: 167723 bases at least Q20
                Estimated insert size: 168513; sum-of-contigs estimation
                Quality coverage: 4x in Q20 bases; sum-of-contigs estimation
            --------------
            * NOTE: Estimated insert size may differ from sequence length
            *   (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 13 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *        1     2807: contig of 2807 bp in length
            *     2808     2907: gap of unknown length
            *     2908     5767: contig of 2860 bp in length
            *     5768     5867: gap of unknown length
            *     5868    11906: contig of 6039 bp in length
            *    11907    12006: gap of unknown length
            *    12007    17970: contig of 5964 bp in length
            *    17971    18070: gap of unknown length
            *    18071    23748: contig of 5678 bp in length
            *    23749    23848: gap of unknown length
            *    23849    29974: contig of 6126 bp in length
            *    29975    30074: gap of unknown length
            *    30075    38700: contig of 8626 bp in length
            *    38701    38800: gap of unknown length
            *    38801    47979: contig of 9179 bp in length
            *    47980    48079: gap of unknown length
            *    48080    66509: contig of 18430 bp in length
            *    66510    66609: gap of unknown length
            *    66610    89425: contig of 22816 bp in length
            *    89426    89525: gap of unknown length
            *    89526   116375: contig of 26850 bp in length
            *   116376   116475: gap of unknown length
            *   116476   141932: contig of 25457 bp in length
            *   141933   142032: gap of unknown length
            *   142033   172461: contig of 30429 bp in length.

COMMENT On Aug 14, 2002 this sequence version replaced gi:21314809.
INFORMATION: http://www.hgsc.bcm.tmc.edu/ or email gc-help@bcm.tmc.edu

CLONE LENGTH: This sequence does not necessarily represent the entire insert of this clone. Overlapping regions of clones are only sequenced and submitted once, so the sequence for the remainder of the insert may be found in the record for the adjacent clones. Overlapping clones are noted at the beginning and end of the Features listing.

ANNOTATION OF FEATURES:
STSs are identified using ePCR (Genome Res. 7:541-550) searches of a local database that includes entries from dbSTS, GDB, and local mapping efforts.
Repeats are identified using RepeatMasker (A. Smit and P. Green, unpublished.) for Human and Mouse sequences.
Genes and Region of sequence similarity are identified by BLAST (Nuc. Acids Res. 25:3389-3402) similarity (expect < 1e-34) to the EST and cDNA sequences. Genes demonstrate at least two exons flanked by consensus splice sites that maintained sequence continuity across the splice junctions. Sequences that are not identical matches are annotated as similar.

SEQUENCING READ COVERAGE:Sequencing is completed to a minimum standard of double strand coverage with a minimum of 2 clones and 2 reads with no ambiguities or 2 chemistries with a minimum of 2 clones and 3 reads with no ambiguities. If the sequence quality for a region does not meet this standard, it will be indicated in the annotation as Low Coverage.

QUALITY OF INDIVIDUAL BASES:This sequence meets stringent quality standards - estimated error rate less than 1 per 10,000 bases. Reports of lowest quality individual bases and measures of base quality are listed below. Description of the metrics can be found at URL:
http://www.hgsc.bcm.tmc.edu:8088/quality.info/genbank.annotation.html.

  AUTHORS   Bagguley,C.
  TITLE     Direct Submission
  JOURNAL   Submitted (29-JAN-2001) Sanger Centre, Hinxton, Cambridgeshire,
            CB10 1SA, UK. E-mail enquiries: humquery@sanger.ac.uk Clone
            requests: clonerequest@sanger.ac.uk
COMMENT     On Nov 8, 2000 this sequence version replaced gi:11043020.
            During sequence assembly data is compared from overlapping clones.
            Where differences are found these are annotated as variations
```

together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.
The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information on the WORMPEP database can be found at http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence was generated from part of bacterial clone contigs of human chromosome 6, constructed by the Sanger Centre Chromosome 6 Mapping Group. Further information can be found at http://www.sanger.ac.uk/HGP/Chr6
IMPORTANT: This sequence is not the entire insert of clone RP11-290P3 It may be shorter because we sequence overlapping sections only once, except for a 100 base overlap.
The true left end of clone RP11-290P3 is at 1 in this sequence. The true left end of clone RP3-372K1 is at 113047 in this sequence. The true right end of clone RP11-343K13 is at 38139 in this sequence. This sequence has been finished according to sequence map criteria as follows. An attempt is made to resolve all sequencing problems, such as compressions and repeats, but not necessarily within known annotated repeat sequence elements. Where the sequence is ambiguous, there is an annotation using the 'unsure' feature key. RP11-290P3 is from the library RPCI-11.2 constructed by the group of Pieter de Jong. For further details see http://www.chori.org/bacpac/home.htm
VECTOR: pBACe3.6.

                 Center project name: 930
                 Center clone name: RP11-290P3
            -------------- Summary Statistics
                 Sequencing Vector: M13mp18; X02513
                 Chemistry: Dye-primer; 0% of reads
                 Chemistry: Dye-terminator Big Dye; 100% of reads
                 Assembly program: Phrap; version 0.990319
                 Consensus quality: 168170 bases at least Q40
                 Consensus quality: 170491 bases at least Q30
                 Consensus quality: 170900 bases at least Q20
                 Insert size: 166209; agarose-fp
                 Insert size: 175642; sum-of-contigs
                 Quality coverage:  6.4x in Q20 bases; agarose-fp
                 Quality coverage:  6.1x in Q20 bases; sum-of-contigs.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 5 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
```

```
            *        1     1648: contig of 1648 bp in length

            Center: Wellcome Trust Sanger Institute
            Center code: SC
            Web site: http://www.sanger.ac.uk
            Contact: humquery@sanger.ac.uk
            --------------
            During sequence assembly data is compared from overlapping clones.
            Where differences are found these are annotated as variations
            together with a note of the overlapping clone name. Note that the
            variation annotation may not be found in the sequence submission
            corresponding to the overlapping clone, as we submit sequences with
            only a small overlap as described above.
            This sequence was finished as follows unless otherwise noted: all
            regions were either double-stranded or sequenced with an alternate
            chemistry or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by at least
            one plasmid subclone or more than one M13 subclone; and the
            assembly was confirmed by restriction digest, except on the rare
```

```
          occasion of the clone being a YAC.
          The following abbreviations are used to associate primary accession
          numbers given in the feature table with their source databases:
          Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information
          on the WORMPEP database can be found at
          http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence
          was generated from part of bacterial clone contigs of human
          chromosome X, constructed by the Sanger Centre Chromosome X Mapping
          Group.  Further information can be found at
          http://www.sanger.ac.uk/HGP/ChrX
          RP1-315B17 is from the library RPCI-1 constructed by the group of
          Pieter de Jong. For further details see
          http://www.chori.org/bacpac/home.htm
          VECTOR: pCYPAC2.

                Insert size: 176000; agarose-fp
                Insert size: 179508; sum-of-contigs
                Quality coverage: 8.7 in Q20 bases; agarose-fp
                Quality coverage: 8.5 in Q20 bases; sum-of-contigs
            --------------.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 6 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
```

```
           * as soon as it is available and the accession number will
           * be preserved.
           *         1    24517: contig of 24517 bp in length

Center project name: HCNC
Center clone name: RP11-21C8
---------- Summary Statistics
Chemistry: Dye-primer Bodipy: Infinity% of reads
Chemistry: Dye-terminator Big Dye: Infinity% of reads
Assembly program: Phrap; version 0.990329
Consensus quality: 149580 bases at least Q40
Consensus quality: 152343 bases at least Q30
Consensus quality: 153504 bases at least Q20
----
* NOTE: Estimated insert size may differ from sequence length
* (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
* NOTE: This is a 'working draft' sequence. It currently
* consists of 8 contigs. Gaps between the contigs
* are represented as runs of N. The order of the pieces
* is believed to be correct as given, however the sizes
* of the gaps between them are based on estimates that have
* provided by the submittor.
* This sequence will be replaced
* by the finished sequence as soon as it is available and
* the accession number will be preserved.
* 1 3144: contig of 3144 bp in length
* 3145 3244: gap of unknown length
* 3245 9096: contig of 5852 bp in length
* 9097 9196: gap of unknown length
* 9197 22106: contig of 12910 bp in length
* 22107 22206: gap of unknown length
* 22207 40512: contig of 18306 bp in length
* 40513 40612: gap of unknown length
* 40613 59686: contig of 19074 bp in length
* 59687 59786: gap of unknown length
* 59787 80941: contig of 21155 bp in length
* 80942 81041: gap of unknown length
* 81042 106851: contig of 25810 bp in length
* 106852 106951: gap of unknown length
* 106952 156228: contig of 49277 bp in length.

TITLE Direct Submission
JOURNAL Submitted (07-MAR-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA
COMMENT On Aug 9, 2001 this sequence version replaced gi:15022643.
INFORMATION: http://www.hgsc.bcm.tmc.edu/ or email gc-help@bcm.tmc.edu

CLONE LENGTH: This sequence does not necessarily represent the entire insert of this clone. Overlapping regions of clones are only sequenced and submitted once, so the sequence for the remainder of the insert may be found in the record for the adjacent clones. Overlapping clones are noted at the beginning and end of the Features listing.

ANNOTATION OF FEATURES:
STSs are identified using ePCR (Genome Res. 7:541-550) searches of a local database that includes entries from dbSTS, GDB, and local mapping efforts.
Repeats are identified using RepeatMasker (A. Smit and P. Green, unpublished.) for Human and Mouse sequences.
Genes and Region of sequence similarity are identified by BLAST (Nuc. Acids Res. 25:3389-3402) similarity (expect < 1e-34) to the EST and cDNA sequences. Genes demonstrate at least two exons flanked by consensus splice sites that maintained sequence continuity across the splice junctions. Sequences that are not identical matches are annotated as similar.

SEQUENCING READ COVERAGE:Sequencing is completed to a minimum standard of double strand coverage with a minimum of 2 clones and 2 reads with no ambiguities or 2 chemistries with a minimum of 2 clones and 3 reads with no ambiguities. If the sequence quality for a region does not meet this standard, it will be indicated in the annotation as Low Coverage.

QUALITY OF INDIVIDUAL BASES:This sequence meets stringent quality standards - estimated error rate less than 1 per 10,000 bases. Reports of lowest quality individual bases and measures of base quality are listed below. Description of the metrics can be found at URL:
http://gc.bcm.tmc.edu:8088/quality.info/genbank.annotation.html.

                Center project name: L3424
                Center clone name: 14_M_21
            -------------- Summary Statistics
                Sequencing vector: M13; M77815; 100% of reads
                Chemistry: Dye-terminator Big Dye; 100% of reads
                Assembly program: Phrap; version 0.960731
                Consensus quality: 147315 bases at least Q40
                Consensus quality: 151520 bases at least Q30
                Consensus quality: 153258 bases at least Q20
                Insert size: 188000; agarose-fp
                Insert size: 154497; sum-of-contigs
                Quality coverage: 4.2 in Q20 bases; agarose-fp
                Quality coverage: 5.2 in Q20 bases; sum-of-contigs
            --------------.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 14 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *        1    18121: contig of 18121 bp in length
            *    18122    18221: gap of 100 bp
            *    18222    19632: contig of 1411 bp in length
            *    19633    19732: gap of 100 bp
            *    19733    23072: contig of 3340 bp in length
            *    23073    23172: gap of 100 bp
            *    23173    26430: contig of 3258 bp in length
            *    26431    26530: gap of 100 bp
            *    26531    30992: contig of 4462 bp in length
            *    30993    31092: gap of 100 bp
            *    31093    36194: contig of 5102 bp in length
            *    36195    36294: gap of 100 bp
            *    36295    42695: contig of 6401 bp in length

NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.

This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by restriction digest.

MAPPING INFORMATION:
Mapping information for this clone was provided by Dr. John D. McPherson, Department of Genetics, Washington University, St. Louis MO. For additional information about the map position of this sequence, see http://genome.wustl.edu/gsc

SOURCE INFORMATION:
The RPCI-11 human BAC library was made from the blood of one male donor, as described by Osoegawa,K., Woon,P.Y., Zhao,B., Frengen,E., Tateno,M., Catanese,J.J. and de Jong,P.J. (1998) An improved approach for construction of bacterial artificial chromosome libraries. Genomics 51:1-8. The clone may be obtained either from Research Genetics, Inc. (http://www.resgen.com) or Pieter de Jong and coworkers at the Roswell Park Cancer Institute (http://bacpac.med.buffalo.edu)
VECTOR: pBACe3.6
NEIGHBORING SEQUENCE INFORMATION:
The clone sequenced to the left is AC015581; the clone sequenced to the right is AC040960. Actual start of this clone is at base position 1 of RP11-387G23; actual end is at base position 197087 of RP11-387G23.

                Quality coverage: 8.6x in Q20 bases; sum-of-contigs
            --------------.
            Overlapping Sequences:
                5':  RP11-963F9 (UWGC:bc0582) AC013250
                3':  RP11-495E23 (UWGC:bc0449) AC114398
            --------------------
            Sequence Quality Assessment:
             This entry has been annotated with sequence quality
             estimates computed by the Phrap assembly program.
             All manually edited bases have been reduced to quality zero.
             Quality levels above 40 are expected to have less than
             1 error in 10,000 bp.
             Base-by-base quality values are not generally visible from the
             GenBank flat file format but are available as part
             of this entry's ASN.1 file.

            This sequence was finished as follows unless otherwise noted:
            all regions were either double-stranded or sequenced with an
            alternate chemistry or covered by high quality data (i.e., Phred
            quality >= 30); an attempt was made to resolve all sequencing
            problems, such as compressions and repeats; all regions were
            covered by at least one plasmid subclone or more than one M13
            subclone; and the assembly was confirmed by restriction digest.
            --------------------
            Sequence Validation:
             This sequence has been validated by Multiple Complete Digest
             fingerprinting. Comparison of the experimentally derived digest
             fragments with sequence-predicted fragments is given below.
             The electronically-digested sequence consists of both insert and
             vector, in order to accurately represent the entire circular BAC.
             Small fragments below a variable cutoff (approximately 400-800 bp)
             are not resolved in the fingerprint and hence do not appear
             in the table. There are no significant remaining discrepancies
             between the experimental and predicted values. Uniquely ordered
             fragments are separated by dashed lines.
                   EcoRI                HindIII               BglII

  JOURNAL   Submitted (29-MAR-2002) Genome Center, University of Washington,
            Box 352145, Seattle, WA 98195, USA
COMMENT     On Mar 29, 2002 this sequence version replaced gi:16328286.
            -------------- Genome Center
                Center: University of Washington Genome Center
                Center Code: UWGC
                Web site: http://www.genome.washington.edu
                Contact: uwgchtgs@u.washington.edu
                Drafting Center: BCM
            -------------- Project Information
                Center project name: chr-3
                Center clone name: RP11-149J4 (bc0625)
            ------------- Summary Statistics
                Sequencing vector: unknown; 54% of reads
                Sequencing vector: plasmid; L08752; 46% of reads
                Chemistry: Dye-terminator ET; 89% of reads
                Chemistry: Dye-terminator Big Dye; 11% of reads
                Assembly program: Phrap; version 0.990319
                Consensus quality: 188471 bases at least Q40
                Consensus quality: 188646 bases at least Q30
                Consensus quality: 188673 bases at least Q20
                Insert size: 188681; sum-of-contigs
                Quality coverage: 8.8x in Q20 bases; sum-of-contigs
            --------------
            Overlapping Sequences:
                5':  CTD-2007I9 (UWGC:bc0773)
                3':  RP11-963F9 (UWGC:bc0582) AC013250
            --------------------
            Sequence Quality Assessment:
             This entry has been annotated with sequence quality
             estimates computed by the Phrap assembly program.
             All manually edited bases have been reduced to quality zero.
             Quality levels above 40 are expected to have less than
             1 error in 10,000 bp.
             Base-by-base quality values are not generally visible from the
             GenBank flat file format but are available as part
             of this entry's ASN.1 file.

            This sequence was finished as follows unless otherwise noted:
            all regions were either double-stranded or sequenced with an
            alternate chemistry or covered by high quality data (i.e., Phred
            quality >= 30); an attempt was made to resolve all sequencing
            problems, such as compressions and repeats; all regions were
            covered by at least one plasmid subclone or more than one M13
            subclone; and the assembly was confirmed by restriction digest.
            --------------------
            Sequence Validation:
             This sequence has been validated by Multiple Complete Digest
             fingerprinting. Comparison of the experimentally derived digest
             fragments with sequence-predicted fragments is given below.
             The electronically-digested sequence consists of both insert and
             vector, in order to accurately represent the entire circular BAC.
             Small fragments below a variable cutoff (approximately 400-800 bp)
             are not resolved in the fingerprint and hence do not appear
             in the table. There are no significant remaining discrepancies
             between the experimental and predicted values. Uniquely ordered
             fragments are separated by dashed lines.

            -------------- Genome Center
                Center: Genome Therapeutics Corporation
                Center code: GTC
                Web site: http://www.genomecorp.com/
                Contact: gtc-seqcenter@genomecorp.com
            -------------- Project Information
                Center project name: hg142

                IMPORTANT: This sequence is not the entire
                insert of clone RP11-456A18.  It may be
                shorter because we sequence overlapping
                sections only once, except for a short overlap.
                The true left end of clone RP11-561G1 is at
                2000 in this sequence.
            -------------- Summary Statistics
                Sequencing vector: N/A
                Chemistry: Dye-terminator Big Dye; 100% of reads
                Assembly program: Phrap; version 990315

               Web site: http://www-seq.wi.mit.edu
               Contact: sequence_submissions@genome.wi.mit.edu
            -------------- Project Information
               Center project name: L5944
               Center clone name: 207_E_21
            -------------- Summary Statistics
               Sequencing vector: M13; M77815; 100% of reads
               Chemistry: Dye-terminator Big Dye; 100% of reads
               Assembly program: Phrap; version 0.960731
               Consensus quality: 147423 bases at least Q40
               Consensus quality: 150978 bases at least Q30
               Consensus quality: 152145 bases at least Q20
               Insert size: 158000; agarose-fp
               Insert size: 152959; sum-of-contigs
               Quality coverage: 4.3 in Q20 bases; agarose-fp
               Quality coverage: 4.4 in Q20 bases; sum-of-contigs
            --------------.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 15 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *        1     1155: contig of 1155 bp in length
            *     1156     1255: gap of 100 bp
            *     1256     3249: contig of 1994 bp in length
            *     3250     3349: gap of 100 bp
            *     3350     5935: contig of 2586 bp in length
            *     5936     6035: gap of 100 bp
            *     6036     8676: contig of 2641 bp in length
            *     8677     8776: gap of 100 bp
            *     8777    11533: contig of 2757 bp in length
            *    11534    11633: gap of 100 bp
            *    11634    15331: contig of 3698 bp in length

  TITLE     Direct Submission
  JOURNAL   Submitted (16-MAR-2001) Sanger Centre, Hinxton, Cambridgeshire,
            CB10 1SA, UK. E-mail enquiries: humquery@sanger.ac.uk Clone
            requests: clonerequest@sanger.ac.uk
COMMENT     On Nov 8, 2000 this sequence version replaced gi:10715861.
            During sequence assembly data is compared from overlapping clones.
            Where differences are found these are annotated as variations
            together with a note of the overlapping clone name. Note that the
            variation annotation may not be found in the sequence submission
            corresponding to the overlapping clone, as we submit sequences with
            only a small overlap as described above.
            The following abbreviations are used to associate primary accession
            numbers given in the feature table with their source databases:
            Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information
            on the WORMPEP database can be found at
            http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence
            was generated from part of bacterial clone contigs of human
            chromosome 1, constructed by the Sanger Centre Chromosome 1 Mapping
            Group.  Further information can be found at
            http://www.sanger.ac.uk/HGP/Chr1
            This sequence is the entire insert of clone RP4-730B13 This
            sequence was finished as follows unless otherwise noted: all
            regions were either double-stranded or sequenced with an alternate
            chemistry or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by at least
            one plasmid subclone or more than one M13 subclone; and the
            assembly was confirmed by restriction digest. RP4-730B13 is from
            the library RPCI-4 constructed by the group of Pieter de Jong. For
            further details see
            http://www.chori.org/bacpac/home.htm
            VECTOR: pCYPAC2.

            requests: clonerequest@sanger.ac.uk
COMMENT     On Mar 5, 2001 this sequence version replaced gi:13160332.
            During sequence assembly data is compared from overlapping clones.
            Where differences are found these are annotated as variations
            together with a note of the overlapping clone name. Note that the
            variation annotation may not be found in the sequence submission
            corresponding to the overlapping clone, as we submit sequences with
            only a small overlap as described above.
            This sequence was finished as follows unless otherwise noted: all
            regions were either double-stranded or sequenced with an alternate
            chemistry or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by at least
            one plasmid subclone or more than one M13 subclone; and the
            assembly was confirmed by restriction digest. The following
            abbreviations are used to associate primary accession numbers given
            in the feature table with their source databases: Em:, EMBL; Sw:,
            SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information on the WORMPEP
            database can be found at
            http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence
            was generated from part of bacterial clone contigs of human
            chromosome 6, constructed by the Sanger Centre Chromosome 6 Mapping
            Group.  Further information can be found at
            http://www.sanger.ac.uk/HGP/Chr6
            RP11-452A14 is from the library RPCI-11.2 constructed by the group
            of Pieter de Jong. For further details see
            http://www.chori.org/bacpac/home.htm
            VECTOR: pBACe3.6
            IMPORTANT: This sequence is not the entire insert of clone
            RP11-452A14 It may be shorter because we sequence overlapping
            sections only once, except for a 100 base overlap.
            The true left end of clone RP11-337M11 is at 141073 in this
            sequence. The true right end of clone RP1-177I10 is at 100 in this
            sequence.

COMMENT     On Apr 4, 2002 this sequence version replaced gi:19807975.
            -------------- Genome Center
                Center: Washington University Genome Sequencing Center
                Center code: WUGSC
                Web site: http://genome.wustl.edu/gsc
                Contact: sapiens@watson.wustl.edu
            -------------- Summary Statistics
                Center project name: H_NH0755F21
            --------------.

            NOTICE:  This sequence may not represent the entire insert of this
            clone.  It may be shorter because we only sequence overlapping
            clone sections once, or longer because we provide a small overlap
            between neighboring data submissions.

            This sequence was finished as follows unless otherwise noted:
            all regions were double stranded, sequenced with an alternate
            chemistry, or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by sequence
            from more than one subclone; and the assembly was confirmed by
            restriction digest.

            MAPPING INFORMATION:
            Mapping information for this clone was provided by Dr. John D.
            McPherson, Department of Genetics, Washington University, St. Louis
            MO. For additional information about the map position of this
            sequence, see http://genome.wustl.edu/gsc

            SOURCE INFORMATION:
            The RPCI-11 human BAC library was made from the blood of one male
            donor, as described by Osoegawa,K., Woon,P.Y., Zhao,B., Frengen,E.,
            Tateno,M., Catanese,J.J. and de Jong,P.J. (1998) An improved
            approach for construction of bacterial artificial chromosome
            libraries. Genomics 51:1-8. The clone may be obtained either from
            Research Genetics, Inc. (http://www.resgen.com) or Pieter de Jong
            and coworkers at http://www.chori.org
            VECTOR:  pBACe3.6

            NEIGHBORING SEQUENCE INFORMATION:
            The clone sequenced to the right is AP002075, 2000 bp overlap.
            Actual start of this clone is at base position 1 of RP11-755F21.

COMMENT     gaps between the contigs are represented as 100 N.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 17 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *       1     3416: contig of 3416 bp in length
            *    3417     3516: gap of 100 bp
            *    3517     4356: contig of 840 bp in length
            *    4357     4456: gap of 100 bp

                Contact: sapiens@watson.wustl.edu
            -------------- Summary Statistics
                Center project name: H_NH0769N03
            --------------.

            NOTICE:  This sequence may not represent the entire insert of this
            clone.  It may be shorter because we only sequence overlapping
            clone sections once, or longer because we provide a small overlap
            between neighboring data submissions.

            This sequence was finished as follows unless otherwise noted:
```

all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by restriction digest.

MAPPING INFORMATION:
Mapping information for this clone was provided by Dr. John D. McPherson, Department of Genetics, Washington University, St. Louis MO. For additional information about the map position of this sequence, see http://genome.wustl.edu/gsc

SOURCE INFORMATION:
The RPCI-11 human BAC library was made from the blood of one male donor, as described by Osoegawa,K., Woon,P.Y., Zhao,B., Frengen,E., Tateno,M., Catanese,J.J. and de Jong,P.J. (1998) An improved approach for construction of bacterial artificial chromosome libraries. Genomics 51:1-8. The clone may be obtained either from Research Genetics, Inc. (http://www.resgen.com) or Pieter de Jong and coworkers at http://www.chori.org
VECTOR: pBACe3.6

NEIGHBORING SEQUENCE INFORMATION:
The clone sequenced to the left is RP11-680I, 2000 bp overlap; the clone sequenced to the right is RP11-755F21. Actual start of this clone is at base position 148706 of RP11-680I; actual end is at base position 158566 of RP11-769N3.

There are single plasmid subclone regions from 82994 to 83124 and 107231 to 107292. Polymorphisms have been identified between AC093694 and AC021940.

            Web site: http://chgc.sh.cn
            Contact: wangsy@chgc.sh.cn
            -------------- Project Information
            Center project name:The Chimpanzee Chromosome 22 Sequencing Project
            Center clone name: PTB-137B16
            -------------- Summary Statistics
            Sequencing vector: pUC18,100% of reads
            Chemistry: Dye-terminator Big Dye and ET; 100% of reads Assembly
            program: Phrap; version 0.990329
            Consensus quality:   193668 bases at least Q40
            Consensus quality:   193750 bases at least Q30
            Consensus quality:   193756 bases at least Q20
            Quality coverage: 10.1x
            --------------
            This sequence was finished as follows unless otherwise noted: all
            regions were double stranded, sequenced with an alternate
            chemistry, or covered by high quality data (i.e., phred quality >=
            30);
            an attempt was made to resolve all sequencing problems, such as
            compressions and repeats; all regions were covered by at one
            plasmid
            subclone or more than one M13 subclone;
            and the assembly was confirmed by restriction digest.
            --------------
            Source information:
            The PTB1 chimpanzee BAC library was prepared from DNA isolated from
            cultured cells established from the blood of a single male
            chimpanzee.
            Clones may be obtained from Asao Fujiyama and co-workers
            (http://www.gsc.riken.go.jp).
            VECTOR:  pKS145
            Sequence Quality Assessment:
            This entry has been annotated with sequence
            estimates computed by the Phrap assembly program.
            All manually edited bases have been reduced to quality zero.
            Quality levels above 40 are expected to have less than 1 error in
            10,000 bp.
            ----------

            Summary Statistics
            Consensus quality: 138007 bases at least Q40
            Consensus quality: 138007 bases at least Q30
            Consensus quality: 138007 bases at least Q20
            Estimated insert size: 175000; agarose-fp estimation
            Estimated insert size: 138007; sum-of-contigs estimation
            Quality coverage:  14.06 in Q20 bases; agarose-fp estimation
            Quality coverage:  17.82 in Q20 bases; sum-of-contigs estimation.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 1 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *       1   138007: contig of 138007 bp in length.

---------- Genome Center
Center: Washington University Genome Sequencing Center
Center code: WUGSC
Web site: http://genome.wustl.edu/gsc
Contact: sapiens@watson.wustl.edu
---------- Summary Statistics
Center project name: H_DJ0614C10
----------.

NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.

This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by restriction digest.

MAPPING INFORMATION:
The sequence of this clone was established as part of a mapping and sequencing collaboration between the NHGRI Chromosome 2 Mapping Project (Eric D. Green, Director), John D. McPherson in the Department of Genetics (Washington University), and the Washington University Genome Sequencing Center. For additional information about the map position of this sequence, see http://www.nhgri.nih.gov/DIR/GTB/CHR2 , send mailto:egreen@nhgri.nih.gov , or see http://genome.wustl.edu/gsc

SOURCE INFORMATION:
This clone was derived from human PAC library RPCI-4, prepared by Pieter de Jong and coworkers at http://www.chori.org using the method described by Ioannou et al., Nature Genetics 6:84-9 (1994).
The library is from one male donor.
The clone may be obtained either from Genome Systems, Inc. (http://www.genomesystems.com) or Research Genetics, Inc. (http://www.resgen.com); or from Pieter de Jong.
VECTOR: pCYPAC2

NEIGHBORING SEQUENCE INFORMATION:
Actual start of this clone is at base position 1 of RP4-614C10; actual end is at base position 155313 of RP4-614C10.

COMMENT     On Jul 3, 2002 this sequence version replaced gi:20153316.
            -------------- Genome Center
                Center: Washington University Genome Sequencing Center
                Center code: WUGSC
                Web site: http://genome.wustl.edu/gsc
                Contact: sapiens@watson.wustl.edu
            -------------- Summary Statistics
                Center project name: H_NH0427F02
            --------------.

            NOTICE:  This sequence may not represent the entire insert of this
            clone.  It may be shorter because we only sequence overlapping
            clone sections once, or longer because we provide a small overlap
            between neighboring data submissions.

            This sequence was finished as follows unless otherwise noted:
            all regions were double stranded, sequenced with an alternate
            chemistry, or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by sequence
            from more than one subclone; and the assembly was confirmed by
            restriction digest.

            MAPPING INFORMATION:
            Mapping information for this clone was provided by Dr. John D.
            McPherson, Department of Genetics, Washington University, St. Louis
            MO. For additional information about the map position of this
            sequence, see http://genome.wustl.edu/gsc

            SOURCE INFORMATION:
            The RPCI-11 human BAC library was made from the blood of one male
            donor, as described by Osoegawa,K., Woon,P.Y., Zhao,B., Frengen,E.,
            Tateno,M., Catanese,J.J. and de Jong,P.J. (1998) An improved
            approach for construction of bacterial artificial chromosome
            libraries. Genomics 51:1-8. The clone may be obtained either from
            Research Genetics, Inc. (http://www.resgen.com) or Pieter de Jong
            and coworkers at http://www.chori.org
            VECTOR:  pBACe3.6

            NEIGHBORING SEQUENCE INFORMATION:
            Actual start of this clone is at base position 1 of RP11-427F2;
            actual end is at base position 165225 of RP11-427F2.

            Single plasmid regions exist between 83459 and 83487; 88788 and
            88803; 88857 and 88870.

            Summary Statistics
            Consensus quality: 159377 bases at least Q40
            Consensus quality: 165628 bases at least Q30
            Consensus quality: 169187 bases at least Q20
            Estimated insert size: 175000; agarose-fp estimation
            Estimated insert size: 172705; sum-of-contigs estimation
            Quality coverage:  5.32 in Q20 bases; agarose-fp estimation
            Quality coverage:  5.39 in Q20 bases; sum-of-contigs estimation.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 9 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *       1     2517: contig of 2517 bp in length
            *    2518     2617: gap of unknown length
            *    2618     6174: contig of 3557 bp in length
            *    6175     6274: gap of unknown length
            *    6275    17421: contig of 11147 bp in length

  TITLE     Direct Submission
  JOURNAL   Submitted (04-MAR-2003) Wellcome Trust Sanger Institute, Hinxton,
            Cambridgeshire, CB10 1SA, UK. E-mail enquiries:
            humquery@sanger.ac.uk Clone requests: clonerequest@sanger.ac.uk
COMMENT     ---------- Genome Center
            Center: Wellcome Trust Sanger Institute
            Center code: SC
            Web site: http://www.sanger.ac.uk
            Contact: humquery@sanger.ac.uk
            ----------
            During sequence assembly data is compared from overlapping clones.
            Where differences are found these are annotated as variations
            together with a note of the overlapping clone name. Note that the
            variation annotation may not be found in the sequence submission
            corresponding to the overlapping clone, as we submit sequences with
            only a small overlap as described above.
            This sequence was finished as follows unless otherwise noted: all
            regions were either double-stranded or sequenced with an alternate
            chemistry or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by at least
            one plasmid subclone or more than one M13 subclone; and the
            assembly was confirmed by restriction digest, except on the rare
            occasion of the clone being a YAC.
            The following abbreviations are used to associate primary accession
            numbers given in the feature table with their source databases:
            Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information
            on the WORMPEP database can be found at
            http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence
            was generated from part of bacterial clone contigs of human
            chromosome 1, constructed by the Sanger Centre Chromosome 1 Mapping
            Group.  Further information can be found at
```

                Contact: sequence_submissions@genome.wi.mit.edu
            -------------- Project Information
                Center project name: L8125
                Center clone name: 304_H_10
            -------------- Summary Statistics
                Sequencing vector: M13; M77815; 100% of reads
                Chemistry: Dye-terminator Big Dye; 100% of reads
                Assembly program: Phrap; version 0.960731
                Consensus quality: 151058 bases at least Q40
                Consensus quality: 159522 bases at least Q30
                Consensus quality: 162718 bases at least Q20
                Insert size: 170000; agarose-fp
                Insert size: 164842; sum-of-contigs
                Quality coverage: 3.9 in Q20 bases; agarose-fp
                Quality coverage: 4.0 in Q20 bases; sum-of-contigs
            --------------.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 33 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *        1     1050: contig of 1050 bp in length
            *     1051     1150: gap of 100 bp
            *     1151     2842: contig of 1692 bp in length
            *     2843     2942: gap of 100 bp
            *     2943     4216: contig of 1274 bp in length
            *     4217     4316: gap of 100 bp
            *     4317     6658: contig of 2342 bp in length
            *     6659     6758: gap of 100 bp
            *     6759     7880: contig of 1122 bp in length
            *     7881     7980: gap of 100 bp

COMMENT     On Mar 28, 2002 this sequence version replaced gi:19747074.
            INFORMATION: http://www.hgsc.bcm.tmc.edu/ or email
            gc-help@bcm.tmc.edu

            CLONE LENGTH: This sequence does not necessarily represent the
            entire insert of this clone. Overlapping regions of clones are only
            sequenced and submitted once, so the sequence for the remainder of
            the insert may be found in the record for the adjacent clones.
            Overlapping clones are noted at the beginning and end of the
            Features listing.

            ANNOTATION OF FEATURES:
               STSs are identified using ePCR (Genome Res. 7:541-550) searches
            of a local database that includes entries from dbSTS, GDB, and
            local mapping efforts.
               Repeats are identified using RepeatMasker (A. Smit and P. Green,
            unpublished.) for Human and Mouse sequences.
               Genes and Region of sequence similarity are identified by BLAST
            (Nuc. Acids Res. 25:3389-3402) similarity (expect < 1e-34) to the
            EST and cDNA sequences. Genes demonstrate at least two exons
            flanked by consensus splice sites that maintained sequence
            continuity across the splice junctions. Sequences that are not
            identical matches are annotated as similar.

            SEQUENCING READ COVERAGE:Sequencing is completed to a minimum
            standard of double strand coverage with a minimum of 2 clones and 2
            reads with no ambiguities or 2 chemistries with a minimum of 2
            clones and 3 reads with no ambiguities. If the sequence quality for
            a region does not meet this standard, it will be indicated in the
            annotation as Low Coverage.

            QUALITY OF INDIVIDUAL BASES:This sequence meets stringent quality
            standards - estimated error rate less than 1 per 10,000 bases.
            Reports of lowest quality individual bases and measures of base
            quality are listed below. Description of the metrics can be found
            at URL:
            http://gc.bcm.tmc.edu:8088/quality.info/genbank.annotation.html.

COMMENT     On Apr 28, 2002 this sequence version replaced gi:9255951.
            -------------- Genome Center
                Center: Baylor College of Medicine
                Center code: BCM
                Web site: http://www.hgsc.bcm.tmc.edu/
                Contact: hgsc-help@bcm.tmc.edu
            -------------- Project Information
                Center project name: HAFU
                Center clone name: RP11-145N22
            -------------- Summary Statistics
                Sequencing vector: M13;
                Chemistry: Dye-terminator Big Dye: 100% of reads
                Assembly program: Phrap; version 0.990329
                Consensus quality: 155068 bases at least Q40
                Consensus quality: 159325 bases at least Q30
                Consensus quality: 161802 bases at least Q20
                Estimated insert size: 166654; sum-of-contigs estimation
                Quality coverage: 4x in Q20 bases; sum-of-contigs estimation
            --------------
            * NOTE: Estimated insert size may differ from sequence length
            *   (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 15 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *        1     2092: contig of 2092 bp in length
            *     2093     2192: gap of unknown length
            *     2193     4938: contig of 2746 bp in length
            *     4939     5038: gap of unknown length
            *     5039     9171: contig of 4133 bp in length
            *     9172     9271: gap of unknown length
```

```
            *     9272    14631: contig of 5360 bp in length
            *    14632    14731: gap of unknown length
            *    14732    20935: contig of 6204 bp in length
            *    20936    21035: gap of unknown length
            *    21036    28250: contig of 7215 bp in length
            *    28251    28350: gap of unknown length
            *    28351    38101: contig of 9751 bp in length
            *    38102    38201: gap of unknown length

COMMENT     E. coli transposon insertion:The present data does not contain E.
            coli transposon sequences which integrated in the
            original/previous sequences.  We determined the boundary between
            the insertion and genomic sequences experimentally, removed the
            insertion sequences, reconstituted the present data. The sequencing
            project is supported by Japan Science Technology Corporation (JST)
            and The Institute of Physical and Chemical Research (RIKEN).

```

```
DEFINITION  Homo sapiens BAC clone RP11-809C23 from 2, complete sequence.
ACCESSION   AC068492
VERSION     AC068492.2  GI:14010945
KEYWORDS    HTG.
SOURCE      Homo sapiens (human)
  ORGANISM  Homo sapiens
            Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;
            Mammalia; Eutheria; Primates; Catarrhini; Hominidae; Homo.

COMMENT     On May 9, 2001 this sequence version replaced gi:7677994.
            -------------- Genome Center
                Center: Washington University Genome Sequencing Center
                Center code: WUGSC
                Web site: http://genome.wustl.edu/gsc
                Contact: sapiens@watson.wustl.edu
            -------------- Summary Statistics
                Center project name: H_NH0809C23
            --------------.

            NOTICE:  This sequence may not represent the entire insert of this
            clone.  It may be shorter because we only sequence overlapping
            clone sections once, or longer because we provide a small overlap
            between neighboring data submissions.

            This sequence was finished as follows unless otherwise noted:
            all regions were double stranded, sequenced with an alternate
            chemistry, or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by sequence
            from more than one subclone; and the assembly was confirmed by
            restriction digest.

            MAPPING INFORMATION:
            Mapping information for this clone was provided by Dr. John D.
            McPherson, Department of Genetics, Washington University, St. Louis
            MO. For additional information about the map position of this
            sequence, see http://genome.wustl.edu/gsc

            SOURCE INFORMATION:
            The RPCI-11 human BAC library was made from the blood of one male
            donor, as described by Osoegawa,K., Woon,P.Y., Zhao,B., Frengen,E.,
            Tateno,M., Catanese,J.J. and de Jong,P.J. (1998) An improved
            approach for construction of bacterial artificial chromosome
            libraries. Genomics 51:1-8. The clone may be obtained either from
            Research Genetics, Inc. (http://www.resgen.com) or Pieter de Jong
            and coworkers at http://www.chori.org
            VECTOR:  pBACe3.6

            NEIGHBORING SEQUENCE INFORMATION:
            Actual start of this clone is at base position 1 of RP11-809C23;
            actual end is at base position 172281 of RP11-809C23.

            ----------------- Genome Center -----------------
            Center: Washington University Genome Sequencing Center
            Center code: WUGSC
            Web site:http://genome.wustl.edu/gsc/index.shtml
            -------------- Project Information --------------
            Center project name: H_NH0005F17
            -------------- Summary Statistics  --------------
            Sequencing vector: M13; 100%
            Sequencing vector: plasmid; 0%
            Chemistry: Dye-primer ET; 100% of reads
            Chemistry: Dye-terminator Big Dye; 0% of reads
            Assembly program: Phrap; version 0.990319
            Consensus quality: 183324 bases at least Q40
            Consensus quality: 191583 bases at least Q30
            Consensus quality: 196031 bases at least Q20
            Insert size: 188000; agarose-fp
            Insert size: 203560; sum-of-contigs
            Quality coverage: 3.58 in Q20 bases; agarose-fp
            Quality coverage: 3.36 in Q20 bases; sum-of-contigs
            ------------------------------------------------
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 34 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *        1     1624: contig of 1624 bp in length
            *     1625     1724: gap of unknown length
            *     1725     2911: contig of 1187 bp in length

  TITLE     Direct Submission
  JOURNAL   Submitted (31-JAN-2001) Whitehead Institute/MIT Center for Genome
            Research, 320 Charles Street, Cambridge, MA 02141, USA
COMMENT     On Jun 13, 2001 this sequence version replaced gi:13487976.
            All repeats were identified using RepeatMasker:
            Smit, A.F.A. & Green, P. (1996-1997)
            http://ftp.genome.washington.edu/RM/RepeatMasker.html
            -------------- Genome Center
                Center: Whitehead Institute/ MIT Center for Genome Research

                Web site: http://www-seq.wi.mit.edu
                Contact: sequence_submissions@genome.wi.mit.edu
            -------------- Project Information
                Center project name: L11772
                Center clone name: 5_F_17
            -------------- Summary Statistics
                Sequencing vector: Plasmid; n/a; 100% of reads
                Chemistry: Dye-terminator Big Dye; 100% of reads
                Assembly program: Phrap; version 0.960731
                Consensus quality: 206008 bases at least Q40
                Consensus quality: 208005 bases at least Q30
                Consensus quality: 208534 bases at least Q20
                Insert size: 200000; agarose-fp
                Insert size: 208845; sum-of-contigs
                Quality coverage: 8.7 in Q20 bases; agarose-fp
                Quality coverage: 8.3 in Q20 bases; sum-of-contigs
            --------------
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 8 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *        1    17945: contig of 17945 bp in length
            *    17946    18045: gap of 100 bp
            *    18046    70195: contig of 52150 bp in length
            *    70196    70295: gap of 100 bp
            *    70296    81731: contig of 11436 bp in length
            *    81732    81831: gap of 100 bp
            *    81832   102026: contig of 20195 bp in length
            *   102027   102126: gap of 100 bp
            *   102127   122861: contig of 20735 bp in length
            *   122862   122961: gap of 100 bp
            *   122962   157365: contig of 34404 bp in length
            *   157366   157465: gap of 100 bp
            *   157466   207248: contig of 49783 bp in length
            *   207249   207348: gap of 100 bp
            *   207349   209545: contig of 2197 bp in length.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

COMMENT	Contact: Hans Bohnert University of Illinois, Urbana-Champaign 1201 West Gregory Drive, Urbana, IL 61801, USA Tel: 217-265-5475 Fax: 217-333-5574 Email: bohnerth@life.uiuc.edu POLYA=Yes.

FEATURES Location/Qualifiers

source 1. .620
/organism="Zea mays"
/mol_type="mRNA"
/db_xref="taxon:4577"
/clone_lib="zmrws05"
/note="Samples were collected in Robert E. Sharp's lab (University of Missouri-Columbia) to construct three normalized cDNA libraries. Dark-grown maize seedlings with primary roots 12-20 mm in length were transplanted to high (-0.03 MPa) or low water potential (-1.6 MPa) vermiculite, and harvested at 5 h and 48 h after transplanting. About 1,000 roots were used for each of the low water potential libraries (zmrws05 and zmrws48) while 500 roots were combined from each of the two time points at high water potential (zmrww00). Each root was divided into 4 segments (distances are from the junction of the root apex and root cap): segment 1, 0-3 mm plus the root cap; segment 2, 3-7 mm; segment 3, 7-12 mm; segment 4, 12-20 mm. (For detatils of conditions see (1) with nutrient modifications as in (2)). The three normalized cDNA libraries were constructed in the lab of Hans Bohnert (University of Illinois-UC). Total RNA was extracted by the 'hot Phenol' method (Plant Molecular Biology manual. D5: 1-13, 2nd ed., 1997). This method worked in eliminating carbohydrate material present in the root tips. The integrity of the RNA was verified by denaturing agarose gels and spectrophotometry (ratio A260/280). Poly(A)+mRNA was isolated twice from total RNA using the Oligotex Direct mRNA kit (Qiagen). Poly(A)+ mRNA was converted to double-stranded cDNA and tagged by using modified Oligo(dT) primers. One of 4 sequence tags corresponding to a different segment of the root was added to the 3'-end of the modified Oligo(dT) primers, including a Not1 site and used to reverse transcribe the segment-specific mRNAs into cDNAs. Each library contains all four tags. A suffix (s1, s2, s3, or s4) has been added to each sequence identifier to designate which region of the root (Root_segment_1, 2, 3, or 4) the sequence was found in based on the identification of the tag. A suffix of s0 indicates that the sequence tag, and hence the source segment, could not be identified. The double stranded cDNAs were size-selected (>450 bp). Size selected cDNAs were adaptored with EcoRI adaptors at both ends, and then digested with NotI. The cDNA was directionally cloned into EcoR1-NotI digested pBS II SK(+) phagemid vector (Stratagene) and electroporated into E.coli DH10B. The total number of white colony forming units (cfu) in the primary libraries before amplification was as follows: zmrws05: 3.37 x 106; zmrws48: 4.87 x 106; zmrww00: 3 x 106. The background of empty clones was less than 1%. Inserts ranged from ~0.5kb to >2.5 kb, as determined by PCR. Plasmid DNA from the primary libraries then was converted to single-stranded circles and used as a template for PCR amplification using the T7 and T3 priming sites that flank the cloned cDNA inserts. The purified PCR products, representing the entire cDNA population cloned in each library, were used as a driver for normalization. Hybridization between the single-stranded library and the PCR products was carried out for 44 hours at 30oC. Non-hybridized single-stranded DNA circles were separated from hybridized DNA rendered partially double-stranded and electroporated into DH10B. The total number of clones with insert was: zmrws05: 2.0x107; zmrws48: 4.2x107; zmrww00: 1.1x107. The background of empty clones was less than 2%. Insert size, determined by PCR of the entire library, ranged from 0.5kb to 2.5kb. (1) Sharp R E; Silk W K; Hsiao T C. Growth of the Maize Primary Root at Low Water Potentials I. Spatial Distribution of Expansive Growth. Plant Physiology (Rockville). 87(1). 1988. 50-57. (2) Spollen W G; LeNoble M E; Samuels T D; Bernstein N; Sharp R E. Abscisic acid accumulation maintains maize primary root elongation at low water potentials by restricting ethylene production. Plant Physiology (Rockville). 122(3). March, 2000. 967-976.

                     (-0.03 MPa) or low water potential (-1.6 MPa) vermiculite,
                     and harvested at 5 h and 48 h after transplanting. About
                     1,000 roots were used for each of the low water potential
                     libraries (zmrws05 and zmrws48) while 500 roots were
                     combined from each of the two time points at high water
                     potential (zmrww00). Each root was divided into 4 segments
                     (distances are from the junction of the root apex and root
                     cap): segment 1, 0-3 mm plus the root cap; segment 2, 3-7
                     mm; segment 3, 7-12 mm; segment 4, 12-20 mm. (For detatils
                     of conditions see (1) with nutrient modifications as in
                     (2)). The three normalized cDNA libraries were constructed
                     in the lab of Hans Bohnert (University of Illinois-UC).
                     Total RNA was extracted by the 'hot Phenol' method (Plant
                     Molecular Biology manual. D5: 1-13, 2nd ed., 1997). This
                     method worked in eliminating carbohydrate material present
                     in the root tips. The integrity of the RNA was verified by
                     denaturing agarose gels and spectrophotometry (ratio
                     A260/280). Poly(A)+mRNA was isolated twice from total RNA
                     using the Oligotex Direct mRNA kit (Qiagen). Poly(A)+ mRNA
                     was converted to double-stranded cDNA and tagged by using
                     modified Oligo(dT) primers. One of 4 sequence tags
                     corresponding to a different segment of the root was added
                     to the 3'-end of the modified Oligo(dT) primers, including
                     a Not1 site and used to reverse transcribe the
                     segment-specific mRNAs into cDNAs. Each library contains
                     all four tags. A suffix (s1, s2, s3, or s4) has been added
                     to each sequence identifier to designate which region of
                     the root (Root_segment_1, 2, 3, or 4) the sequence was
                     found in based on the identification of the tag. A suffix
                     of s0 indicates that the sequence tag, and hence the
                     source segment, could not be identified. The double
                     stranded cDNAs were size-selected (>450 bp). Size selected
                     cDNAs were adaptored with EcoRI adaptors at both ends, and
                     then digested with NotI. The cDNA was directionally cloned
                     into EcoR1-NotI digested pBS II SK(+) phagemid vector
                     (Stratagene) and electroporated into E.coli DH10B. The
                     total number of white colony forming units (cfu) in the
                     primary libraries before amplification was as follows:
                     zmrws05: 3.37 x 106; zmrws48: 4.87 x 106; zmrww00: 3 x
                     106. The background of empty clones was less than 1%.
                     Inserts ranged from ~0.5kb to >2.5 kb, as determined by
                     PCR. Plasmid DNA from the primary libraries then was
                     converted to single-stranded circles and used as a
                     template for PCR amplification using the T7 and T3 priming
                     sites that flank the cloned cDNA inserts. The purified PCR
                     products, representing the entire cDNA population cloned
                     in each library, were used as a driver for normalization.
                     Hybridization between the single-stranded library and the
                     PCR products was carried out for 44 hours at 30oC.
                     Non-hybridized single-stranded DNA circles were separated
                     from hybridized DNA rendered partially double-stranded and
                     electroporated into DH10B. The total number of clones with
                     insert was: zmrws05: 2.0x107; zmrws48: 4.2x107; zmrww00:
                     1.1x107. The background of empty clones was less than 2%.
                     Insert size, determined by PCR of the entire library,
                     ranged from 0.5kb to 2.5kb. (1) Sharp R E; Silk W K; Hsiao

/clone_lib="zmrws05"
/note="Samples were collected in Robert E. Sharp's lab (University of Missouri-Columbia) to construct three normalized cDNA libraries. Dark-grown maize seedlings with primary roots 12-20 mm in length were transplanted to high (-0.03 MPa) or low water potential (-1.6 MPa) vermiculite, and harvested at 5 h and 48 h after transplanting. About 1,000 roots were used for each of the low water potential libraries (zmrws05 and zmrws48) while 500 roots were combined from each of the two time points at high water potential (zmrww00). Each root was divided into 4 segments (distances are from the junction of the root apex and root cap): segment 1, 0-3 mm plus the root cap; segment 2, 3-7 mm; segment 3, 7-12 mm; segment 4, 12-20 mm. (For detatils of conditions see (1) with nutrient modifications as in (2)). The three normalized cDNA libraries were constructed in the lab of Hans Bohnert (University of Illinois-UC). Total RNA was extracted by the 'hot Phenol' method (Plant Molecular Biology manual. D5: 1-13, 2nd ed., 1997). This method worked in eliminating carbohydrate material present in the root tips. The integrity of the RNA was verified by denaturing agarose gels and spectrophotometry (ratio A260/280). Poly(A)+mRNA was isolated twice from total RNA using the Oligotex Direct mRNA kit (Qiagen). Poly(A)+ mRNA was converted to double-stranded cDNA and tagged by using modified Oligo(dT) primers. One of 4 sequence tags corresponding to a different segment of the root was added to the 3'-end of the modified Oligo(dT) primers, including a Not1 site and used to reverse transcribe the segment-specific mRNAs into cDNAs. Each library contains all four tags. A suffix (s1, s2, s3, or s4) has been added to each sequence identifier to designate which region of the root (Root_segment_1, 2, 3, or 4) the sequence was found in based on the identification of the tag. A suffix of s0 indicates that the sequence tag, and hence the source segment, could not be identified. The double stranded cDNAs were size-selected (>450 bp). Size selected cDNAs were adaptored with EcoRI adaptors at both ends, and then digested with NotI. The cDNA was directionally cloned into EcoR1-NotI digested pBS II SK(+) phagemid vector (Stratagene) and electroporated into E.coli DH10B. The total number of white colony forming units (cfu) in the primary libraries before amplification was as follows: zmrws05: 3.37 x 106; zmrws48: 4.87 x 106; zmrww00: 3 x 106. The background of empty clones was less than 1%. Inserts ranged from ~0.5kb to >2.5 kb, as determined by PCR. Plasmid DNA from the primary libraries then was converted to single-stranded circles and used as a template for PCR amplification using the T7 and T3 priming

sites that flank the cloned cDNA inserts. The purified PCR products, representing the entire cDNA population cloned in each library, were used as a driver for normalization. Hybridization between the single-stranded library and the PCR products was carried out for 44 hours at 30oC. Non-hybridized single-stranded DNA circles were separated from hybridized DNA rendered partially double-stranded and electroporated into DH10B. The total number of clones with insert was: zmrws05: 2.0x107; zmrws48: 4.2x107; zmrww00: 1.1x107. The background of empty clones was less than 2%. Insert size, determined by PCR of the entire library, ranged from 0.5kb to 2.5kb. (1) Sharp R E; Silk W K; Hsiao T C. Growth of the Maize Primary Root at Low Water Potentials I.                      /clone_lib="Scarlet Runner Bean Suspensor Region TriplEx2"
                     /note="Organ: Suspensor Region of Globular-Stage Embryos;
                     Vector: TriplEx2; Site_1: SfiIA; Site_2: SfiIB; Suspensor
                     regions were micro-dissected from globular-stage embryos
                     six days after pollination from greenhouse-grown plants
                     [Weterings et al., Plant Cell 13, 2409-2425 (2001)].
                     Double-stranded cDNA was synthesized from suspensor mRNA
                     using the SMART cDNA Library Construction Kit according to
                     the manufacturer (Clontech). The suspensor cDNA fragments
                     were directionally ligated into the SfiI restriction site
                     of the lambda TriplEx2 vector (Clontech), and the
                     recombinant cDNAs were transformed into E. coli XL1-Blue
                     cells (Clontech). Suspensor cDNA plasmids used for
                     directional sequencing were obtained by in vivo excision
                     from the lambda TriplEx2 recombinants in E. coli BM25.8
                     cells (Clontech)."

                     regions were micro-dissected from globular-stage embryos
                     six days after pollination from greenhouse-grown plants
                     [Weterings et al., Plant Cell 13, 2409-2425 (2001)].
                     Double-stranded cDNA was synthesized from suspensor mRNA
                     using the SMART cDNA Library Construction Kit according to
                     the manufacturer (Clontech). The suspensor cDNA fragments
                     were directionally ligated into the SfiI restriction site
                     of the lambda TriplEx2 vector (Clontech), and the
                     recombinant cDNAs were transformed into E. coli XL1-Blue
                     cells (Clontech). Suspensor cDNA plasmids used for
                     directional sequencing were obtained by in vivo excision
                     from the lambda TriplEx2 recombinants in E. coli BM25.8
                     cells (Clontech)."

                     /note="Vector: PWD42nv; Purified genomic DNA from M.
                     musculus C57BL/6J (male) was obtained  from the Jackson
                     Laboratory Mouse DNA Resource
                     (http://www.jax.org/resources/documents/dnares/). The DNA
                     was hydrodynamically sheared by repeated passage through a
                     0.005 inch orifice at constant velocity. The sheared DNA
                     was blunt end-repaired with T4 DNA polymerase and T4
                     polynucleotide kinase. Adaptor oligonucleotides were
                     ligated to the blunt ends in high  molar excess. The
```

adaptored DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative of pWD42 (gi|4732114|gb|AF129072.1), a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into chemically-competent E. coli XL10-Gold (Stratagene) cells and selected for ampicillin resistance."

            Basecalling by phred version 0.020425.c. This sequence was derived
            from the raw sequence read by clipping with lucy version 1.19s.
            Bases 50-712 of the raw sequence (length 1364) were retained after
            clipping.

PT   Diagnosing, assessing susceptibility and treating schizophrenia, involves
PT   observing regulator of G-protein signaling 4, RGS4 levels in a subject.
XX
PS   Claim 1; Page 20-33; 112pp; English.
XX
CC   This invention relates to a novel method for diagnosing schizophrenia or
CC   determining susceptibility to schizophrenia in a human. The method
CC   comprises obtaining from a patient a DNA sample and detecting variations
CC   in the regulator of G-protein signalling 4 (RGS4) gene. Alternatively,
CC   the method involves measuring RGS4 mRNA or protein levels in a tissue
CC   sample from the patient and determining if there is a reduced level. The
CC   method of the invention is useful for diagnosing and determining
CC   susceptibility to schizophrenia. The invention also comprises a method
CC   that is useful for treating schizophrenia which includes a prophylactic
CC   treatment. The method of genotyping polymorphic variants in the RGS-4
CC   gene is applied to diagnosing pathologies of the schizophrenic spectrum,
CC   such as in particular schizotypy, schizoid individuals, etc. This method
CC   offers the possibility of diagnosing schizophrenia by a biological test
CC   and no longer exclusively by clinical evaluations. The present sequence
CC   represents the genomic DNA encoding the human regulator of G-protein
CC   signalling 4 (RGS4) protein used in the method of the invention. The gene
CC   for the RGS4 protein is located on human chromosome 1q21-22

PT   Diagnosing breast cancer in a patient comprises detecting the level of
PT   gene expression in cell or tissue samples, where a differential gene
PT   expression is indicative of breast cancer.
XX
PS   Claim 1; SEQ ID NO 882; 260pp + Sequence Listing; English.
XX
CC   The present invention relates to methods of diagnosing breast cancer in a
CC   patient, which comprise detecting the level of expression in a tissue
CC   sample of two or more genes selected from those shown in ABT09867-
CC   ABT11112, where a differential expression of the genes indicates breast
CC   cancer. The methods are useful in diagnosing, treating, detecting the
CC   progression, and in monitoring treatment of breast cancer in patients.
CC   The methods are also useful as a screening tool for agents that modulate
CC   the onset or progression of breast cancer. The breast cancer genes may be
CC   used as diagnostic markers for the prediction or identification of the
CC   malignant state of breast tissue, for confirming the type and progression
CC   of cancer, and for drug screening and assays. The present sequence is a
CC   coding sequence of the invention. Note: The sequence data for this patent
CC   did not form part of the printed specification, but was obtained in
CC   electronic format directly from WIPO at
CC   ftp.wipo.int/pub.published_pct_sequences

XX
PT   Early detection of soft tissue sarcoma comprises determining expression
PT   of a gene in a first soft tissue sample and a normal soft tissue sample
PT   and comparing the gene expression, also useful in treating soft tissue
PT   sarcoma.
XX
PS   Example 2; SEQ ID NO 1125; 210pp; English.
XX
CC   The invention relates to a novel method for detecting soft tissue sarcoma
CC   which comprises obtaining a first soft tissue sample from an individual
CC   and a normal soft tissue sample from the same or different individual,
CC   determining the expression of a gene in both samples and comparing the
CC   expression of the gene in both soft tissue samples, where a higher level
CC   of protein expression in the first soft tissue sample indicates the
CC   presence of soft tissue sarcoma. The method of the invention has
```

```
CC   cytostatic applications and may be useful for detecting soft tissue
CC   sarcoma, possibly via gene therapy or vaccine production. The nucleic
CC   acid sequences may be useful in diagnostic and screening applications.
CC   The current sequence is that of a human soft tissue sarcoma-upregulated
CC   DNA of the invention. The current sequence is not shown within the
CC   specification per se but was submitted in CD format by the inventor.

PT   Determining whether a subject has, or is at risk of developing, an
PT   abnormally low high density lipoprotein-C (HDL-C) level comprises
PT   detecting an allelic variant of a polymorphic region from any of a set of
PT   27 genes.
XX
PS   Disclosure; SEQ ID NO 27; 37pp; English.
XX
CC   The invention relates to determining whether a subject has, or is at risk
CC   of developing, an abnormally low high density lipoprotein-C (HDL-C) level
CC   comprises determining whether the subject has an allelic variant of a
CC   polymorphic region from any of 27 genes (alleles listed in Table 5 of the
CC   specification). Also included are determining whether a male subject has,
CC   or is at risk of developing, an abnormally low HDL-C level, comprising
CC   determining whether the male subject has an allelic variant of a
CC   polymorphic region listed in Table 5 which is associated with abnormally
CC   low HDL-C levels in males, and determining whether a female subject has,
CC   or is at risk of developing, an abnormally low HDL-C level, comprising
CC   determining whether the female subject has an allelic variant of a
CC   polymorphic region listed in Table 5 which is associated with abnormally
CC   low HDL-C levels in females. The allelic variant in determining whether a
CC   subject has, or is at risk of developing, an abnormally low HDL-C level
CC   is APOA 1 CC, CD14 1 CT, COL5A2 1 GG, EDNRB 1 AG or AA, FABP3 1 CT, GBE1
CC   1 AG or GG, LIPC 5 AA, MTHFR 1 CC, VWF 2 GG, or their complements. The
CC   allelic variant in determining whether a male subject has, or is at risk
CC   of developing, an abnormally low HDL-C level, LRP1 3 CC or CT, PAI2 4 GG,
CC   or PPARG 1 CG, or their complements. The allelic variants are also COL5A2
CC   1 GG, CD14 1 CT or CC, and FABP3 1 CT, in combination, or their
CC   complements. The methods are useful for diagnosing (a predisposition to)
CC   abnormally low levels of low high density lipoprotein-C (HDL-C) in a
CC   subject, The methods are useful in diagnosing (a predisposition to) or
CC   prognosticating diseases and disorders associated with abnormal lipid
CC   levels such as vascular and metabolic diseases, e.g., coronary artery
CC   disease. The present sequence is a human gene containing a SNP (single
CC   nucleotide polymorphism associated with low high density lipoprotein-C
CC   (HDL-C) levels.

XX
PS claim 16; seqid 199; 310pp; English.
XX
CC The invention relates to an isolated nucleic acid comprising at least 10
CC contiguous nucleotides of any of the 233 polynucleotide sequences given
CC in the specification, or its complement. The nucleic acids encode cancer-
CC associated proteins. Also included are an expression vector comprising
CC the isolated nucleic acid cited above, a host cell comprising the above
CC recombinant nucleic acid or expression vector, a microarray for detecting
CC a cancer-associated (CA) nucleic acid comprising at least one probe
CC comprising at least 10 contiguous nucleotides of any of the above-
CC mentioned nucleotide sequences, an isolated polypeptide (encoded within
CC an open reading frame of a CA sequence selected from any of the 95
CC polynucleotide sequences as mentioned in the specification, or its
CC complement), an isolated antibody, (or its antigen binding fragment) that
CC binds to the above polypeptide, a hybridoma that produces the above
CC monoclonal antibody, a pharmaceutical composition comprising the above
CC antibody and a pharmaceutical excipient, a kit for detecting cancer
CC cells(comprising the antibody cited above, methods for diagnosing cancer
CC or for detecting the presence or absence of cancer cells in an
CC individual, a method for inhibiting growth of cancer cells in an
CC individual, a method for delivering a therapeutic agent to cancer cells
CC in an individual, an electronic library comprising the above
CC polynucleotide or polypeptide (or their fragments), methods of screening
CC for anticancer activity or for a bioactive agent capable of modulating
CC the activity of a CA protein (CAP), methods for detecting cancer
CC associated with expression of a polypeptide in a test cell sample, a
CC method for treating cancers and a method for inhibiting the expression of
CC CA gene in a cell. The composition and methods are useful for detecting,
CC diagnosing, preventing and treating cancers, especially lymphoma and
CC leukaemia. These may also be used in screening for agents that modulate
CC cancer. The present sequence is a human CAP genomic sequence. Note: The
CC sequence data for this patent did not form part of the printed
CC specification, but was obtained in electronic format directly from WIPO
CC at ftp.wipo.int/pub/published_pct_sequences

PT Fragments of chemically modified genes associated with tumor suppressor
PT genes and oncogenes, useful in designing primers and probes for analyzing
PT diseases associated with cytosine methylation state e.g. cancer.
XX
PS Claim 1; SEQ ID NO 472; 27pp; English.
XX
CC The invention relates to a nucleic acid comprising a sequence of 18
CC bases, of a segment of chemically pretreated DNA (CP DNA) e.g. with
CC bisulphite, of genes associated with tumour suppression and oncogenes
CC having a sequence taken from 536 (actually 533 since numbers 408, 458 and
CC 500 are missing from the sequence listing) sequences (Ss) and sequences
CC complementary to (Ss). The nucleic acid may be a peptide nucleic acid-
CC oligomer (PNA) of at least 9 nucleotides and may form part of a set of
CC probes for detecting the cytosine methylation state and/or single
CC nucleotide polymorphisms and also to be used in an array for analysing
CC diseases associated with CpG dinucleotides e.g. cancers and tumours. The
CC probes can also be used in a method for ascertaining genetic and/or
CC epigenetic parameters for the diagnosis and/or therapy of existing
CC diseases or the predisposition to specific diseases, by analysing
CC cytosine methylations. The parameters may be compared to another set of
CC genetic and/or epigenetic parameters, the differences serving as basis
CC for diagnosis and/or prognosis events which are disadvantageous to
CC patients. The present sequence is one of the 533 genomic sequences
CC derived from tumour suppressor genes and oncogenes. Sequences with even
CC numbered Seq ID numbers are the complementary sequence of the
CC corresponding odd numbered sequence (e.g. ID 2 and ID1, ID 536 and ID
CC 535, except for those whose partner sequence is missing). Note: The
CC sequence data for this patent did not form part of the printed
CC specification, but was obtained in electronic format directly from WIPO
CC at ftp.wipo.int/pub/published_pct_sequences

PT Fragments of chemically modified genes associated with tumor suppressor
PT genes and oncogenes, useful in designing primers and probes for analyzing
PT diseases associated with cytosine methylation state e.g. cancer.
XX
PS Claim 1; SEQ ID NO 471; 27pp; English.
XX
CC The invention relates to a nucleic acid comprising a sequence of 18
CC bases, of a segment of chemically pretreated DNA (CP DNA) e.g. with
CC bisulphite, of genes associated with tumour suppression and oncogenes
CC having a sequence taken from 536 (actually 533 since numbers 408, 458 and
CC 500 are missing from the sequence listing) sequences (Ss) and sequences
CC complementary to (Ss). The nucleic acid may be a peptide nucleic acid-
CC oligomer (PNA) of at least 9 nucleotides and may form part of a set of
CC probes for detecting the cytosine methylation state and/or single
CC nucleotide polymorphisms and also to be used in an array for analysing
CC diseases associated with CpG dinucleotides e.g. cancers and tumours. The
CC probes can also be used in a method for ascertaining genetic and/or
CC epigenetic parameters for the diagnosis and/or therapy of existing
CC diseases or the predisposition to specific diseases, by analysing
CC cytosine methylations. The parameters may be compared to another set of
CC genetic and/or epigenetic parameters, the differences serving as basis
CC for diagnosis and/or prognosis events which are disadvantageous to
CC patients. The present sequence is one of the 533 genomic sequences
CC derived from tumour suppressor genes and oncogenes. Note: The sequence
CC data for this patent did not form part of the printed specification, but
CC was obtained in electronic format directly from WIPO at
CC ftp.wipo.int/pub/published_pct_sequences

PT   New polynucleotide, useful for preparing a composition for treating a
PT   patient in need of increased or suppressed activity or expression of the
PT   guanosine triphosphate-binding protein coupled receptor.
XX
PS   Claim 1; SEQ ID NO 2025; 28pp; English.
XX
CC   The invention relates to a novel polynucleotide encoding a guanosine
CC   triphosphate-binding protein coupled receptor (GPCR). A polynucleotide of
CC   the invention may have a use in gene therapy. The polynucleotide and
CC   polypeptide are useful for preparing a composition for treating a patient
CC   in need of increased or suppressed activity or expression of the
CC   guanosine triphosphate-binding protein coupled receptor. The
CC   polynucleotide sequences shown in ADC85548-ADC87616 encode GPCR's of the
CC   invention.

PT   New polynucleotides comprising cis-acting transcriptional control
PT   sequences, e.g. promoter sequence, of telomerase reverse transcriptase
PT   genes, useful in the treatment of cancer.
XX
PS   Claim 9; Page 58-61; 63pp; English.
XX
CC   The present sequence represents the human telomerase reverse
CC   transcriptase (TERT) promoter and gene. TERT is part of the telomerase
CC   complex responsible for maintaining telomere length and increasing
CC   replicative capacity of progenitor cells. Telomerase activity is turned
CC   off in mature differentiated cells, but is turned back on again in
CC   hyperplasic diseases, including many cancers. The polynucleotide
CC   comprises cis-acting transcriptional control sequences, e.g. promoter
CC   sequence. These promoter sequences are used to produce oncolytic viruses,
CC   in which a toxin or genetic element essential for viral replication is
CC   placed under the control of a TERT promoter. As a result, the virus
CC   replicates preferentially in cells expressing TERT, and selectively lyses
CC   cancer cells. The oncolytic viruses are useful for treating cancer in
CC   humans or animals. The TERT promoter sequences are useful in the
CC   treatment of cancer and other diseases of cell proliferation such as
CC   degenerative and aging processes and diseases of aging, immunological
CC   disorders, or infertility

PT New polynucleotide encoding glycosyltransferase enzymes including histo
PT blood group transferase useful for treating conditions associated with
PT hyperproliferation, such as cancers and other neoplasias.
XX
PS Claim 9; Page 17-20; 49pp; English.
XX
CC The invention relates to a polynucleotide comprising an encoding sequence
CC for a glycosyltransferase, under control of a heterologous tumour
CC specific or tissue specific transcriptional control element, where
CC expression of the polynucleotide in a human cell causes the cell to
CC express a cell-surface carbohydrate determinant to which some or all
CC humans have a naturally occurring antibody. The polynucleotide of the
CC invention is useful for killing cancer cells and for preparing a
CC medicament for the treatment of cancer. The polynucleotide sequence of
CC the invention can be used to treat disorders by gene therapy. This
CC polynucleotide sequence represents the human TERT (telomerase reverse
CC transcriptase) promoter and upstream sequence related to the invention

PT   Novel replication-conditional virus useful for cytolysis of target cells
PT   e.g. cancer cells and preparing a medicament for treating cancer,
PT   comprises heterologous replication element in an adenovirus-based
PT   construct.
XX
PS   Claim 11; Page 26-29; 32pp; English.
XX
CC   The present invention relates to a new replication-conditional virus with
CC   a genome comprising adenovirus replication genes and one or more
CC   heterologous gene(s) that functionally replaces one or more adenovirus
CC   gene(s) required for replication or assembly of the virus. The invention
CC   is useful for killing a cancer cell (such as lung, pancreatic cancer,
CC   medulloblastoma, cervical carcinoma, fibrosarcoma or osteosarcoma),
CC   killing a cell expressing TERT (telomerase reverse transcriptase), and in
CC   preparing a medicament for treating cancer and a condition associated
CC   with increased expression of TERT in affected cells, in a subject. The
CC   invention is also useful for cytolysis of specific target cells. The
CC   invention is further useful for producing replication defective
CC   adenovirus vector which is useful for transient expression of a
CC   heterologous therapeutic gene to correct a congenital defect, introducing
CC   proinflammatory or antiinflammatory activity, enhancing telomerase
CC   function, and delivering heterologous effector genes that induce killing
CC   of the transduced cells. The invention is more safe for use in cancer
CC   therapy. The present nucleic acid sequence represents the human TERT
CC   sequence contained within a lambda clone sequence of the invention

PT   Depleting a cell e.g., human embryonic stem cell population of
PT   undifferentiated stem cells (UC) for use in regenerative medicine
PT   comprises genetically altering UC in a population to express nucleic acid
PT   encoding a lethal product.
XX
PS   Example 9; Page 62-66; 67pp; English.
XX
CC   The invention relates to a system for depleting a cell population of
CC   undifferentiated stem cells, by introducing nucleic acids of structure P-
CC   X, where X is a nucleic acid encoding product that is lethal to a cell in
CC   which it is expressed; or renders a cell in which it is expressed
CC   susceptible to the lethal effect of an external agent, and P is a
CC   transcriptional control element causing X to be preferentially expressed
CC   in the undifferentiated stem cells. The system is used for depleting a
CC   cell population (preferably, human embryonic stem cells) of
CC   undifferentiated stem cells. A population of differentiated cells is
CC   useful in regenerative medicine, and for preparing antibodies and cDNA
CC   libraries that are specific for a differentiated phenotype. The cell
CC   populations are also useful for drug screening and therapeutic
CC   applications. The differentiated cells are useful for tissue
CC   reconstitution or regeneration in a human patient in need of treatment.
CC   The cells are administered in a manner that permits to graft to the
CC   intended tissue side and reconstitute or regenerate the functionally
CC   deficient area. The neural progenitor cells are useful for treating acute
CC   or chronic damage to the nerve system e.g. epilepsy, stroke, ischaemia,
CC   Huntington's disease, Parkinson's disease, multiple sclerosis,
CC   leukodystrophies, neuritis, etc. The hepatocytes and hepatocyte
CC   precursors are useful for assessing animal models for ability to repair
CC   liver damage. The cardiomyocyte population is useful for assessing animal
CC   models for cryoinjury, regenerating cardiac muscle and to treat
CC   insufficient cardiac function. This polynucleotide sequence represents
CC   the DNA of plasmid pGRN144 containing the human hTERT gene relating to
CC   the invention

```
CC   The present invention relates to a viral vector comprising first and
CC   second genes controlled by heterologous control elements, where the first
CC   gene is preferentially expressed in cells expressing human telomerase
CC   reverse transcriptase (hTERT), and another gene under the control of a
CC   heterologous transcriptional control element for a tissue or tumour
CC   specific gene other than TERT, and where transduction of the vector into
CC   a mammalian cell expressing TERT causes the death of the cell or its
CC   progeny. In particular, the second gene may be under the control of a
CC   transcriptional control element for a tissue specific gene selected from
CC   albumin, alpha-fetoprotein, prostate-specific antigen, mitochondrial
CC   creatine kinase, myelin basic protein, glial fibrillary acidic protein,
CC   and neuron-specific enolase. The second gene may be under the control of
CC   a transcriptional control element for a human telomerase RNA component
CC   (hTR). The vector of the invention is useful for killing a cancer cell,
CC   or treating a subject for a condition associated with increased
CC   expression of TERT in affected cells. The vector is also useful in the
CC   preparation of a medicament for treatment of a condition associated with
CC   increased expression of TERT, particularly cancer, and especially liver
CC   cancer, prostate cancer, muscle cancer, neural cell cancer, lung cancer,
CC   pancreatic cancer, medulloblastoma, cervical carcinoma, fibrosarcoma, and
CC   osteosarcoma. The present sequence represents a lambda clone
CC   (lambdaGphi5) containing human TERT DNA.

PT   New polynucleotide, useful for preparing a composition for treating a
PT   patient in need of increased or suppressed activity or expression of the
PT   guanosine triphosphate-binding protein coupled receptor.
XX
PS   Claim 1; SEQ ID NO 2005; 28pp; English.
XX
CC   The invention relates to a novel polynucleotide encoding a guanosine
CC   triphosphate-binding protein coupled receptor (GPCR). A polynucleotide of
CC   the invention may have a use in gene therapy. The polynucleotide and
CC   polypeptide are useful for preparing a composition for treating a patient
CC   in need of increased or suppressed activity or expression of the
CC   guanosine triphosphate-binding protein coupled receptor. The
CC   polynucleotide sequences shown in ADC85548-ADC87616 encode GPCR's of the
CC   invention.

PT   New polynucleotide, useful for preparing a composition for treating a
PT   patient in need of increased or suppressed activity or expression of the
PT   guanosine triphosphate-binding protein coupled receptor.
XX
PS   Claim 1; SEQ ID NO 2023; 28pp; English.
XX
CC   The invention relates to a novel polynucleotide encoding a guanosine
CC   triphosphate-binding protein coupled receptor (GPCR). A polynucleotide of
CC   the invention may have a use in gene therapy. The polynucleotide and
CC   polypeptide are useful for preparing a composition for treating a patient
CC   in need of increased or suppressed activity or expression of the
CC   guanosine triphosphate-binding protein coupled receptor. The
CC   polynucleotide sequences shown in ADC85548-ADC87616 encode GPCR's of the
CC   invention.

XX
PT Nucleic acids encoding human immune/hematopoietic antigen polypeptides,
PT useful for preventing, diagnosing and/or treating cancers and metastasis.
XX
PS Disclosure; SEQ ID NO 22051; 3071pp + Sequence Listing; English.
XX
CC AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I)
CC amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic
CC activity, and can be used in gene therapy and vaccine production. (I)
CC proteins and polynucleotides may be used in the prevention, diagnosis and
CC treatment of diseases associated with inappropriate (I) expression. For
CC example, they may be used to treat disorders associated with decreased
CC expression by rectifying mutations or deletions in a patient's genome
CC that affect the activity of (I) by expressing inactive proteins or to
CC supplement the patients own production of (I). Additionally, (I)
CC polynucleotides may be used to produce the secreted (I), by inserting the
CC nucleic acids into a host cell and culturing the cell to express the
CC protein. (I) proteins and polynucleotides may be used to prevent,
CC diagnose and treat immune/haematopoietic-related diseases, especially
CC cancers and cancer metastases of haematopoietic-derived cells. AAK64703
CC to AAK87694 represent human immune/haematopoietic antigen genomic
CC sequences from the present invention. AAK54942 to AAK54950 and AAM82169
CC represent sequences used in the exemplification of the present invention

PT   Detecting granulocyte activation by detecting differential expression of
PT   genes associated with granulocyte activation, which serves as diagnostic
PT   markers that is useful for monitoring disease states and drug toxicity.
XX
PS   Claim 1; SEQ ID NO 1052; 114pp; English.
XX
CC   The invention relates to detecting (M1) granulocyte (GC) activation
CC   (GCA), by detecting the level of expression of gene(s) (Gs) identified by
CC   DNA chip analysis as given in the specification, and comparing the
CC   expression level to an expression level in an unactivated GC, where
CC   differential expression of Gs is indicative of GCA. Also included are
CC   modulating (M2) GA by contacting GC with an agent that alters the
CC   expression of at least one gene in Gs; (2) screening (M3) for an agent
CC   capable of modulating GCA or an inflammation (especially chronic) in a
CC   tissue, an allergic response in a subject, exposure of a subject to a
CC   pathogen or sterile inflammatory disease using the gene expression
CC   profile; (3) detecting (M4) an inflammation (especially chronic) in a
CC   tissue, an allergic response in a subject, exposure of a subject to a
CC   pathogen or sterile inflammatory disease, by detecting the level of
CC   expression in a sample of the tissue of gene(s) from Gs, where the level
CC   of expression of the gene is indicative of inflammation; (4) treating
CC   (M5) an inflammation (especially chronic) or in a tissue, an allergic
CC   response in a subject, exposure of a subject to a pathogen or sterile
CC   inflammatory disease, by contacting a tissue having inflammation with an
CC   agent that modulates the expression of gene(s) from Gs in the tissue. M1
CC   is useful for detecting GCA; M2 is useful for modulating GA; M3 is useful
CC   for screening an agent capable of modulating GCA preferably in an
CC   inflammation in a tissue; M4 is useful for detecting an inflammation
CC   (especially chronic) in a tissue, an allergic response in a subject,
CC   exposure of a subject to a pathogen or sterile inflammatory disease (e.g.
CC   psoriasis, rheumatoid arthritis, glomerulonephritis, asthma, thrombosis,
CC   cardiac reperfusion injury, renal reperfusion injury, ARDS, adult
CC   respiratory distress syndrome, inflammatory bowel disease, Crohn's
CC   disease, ulcerative colitis, periodontal disease; also bacterial
CC   infection, viral infection, parasitic infection, protozoal infection,
CC   fungal infection and M5 is useful for treating one of the above
CC   conditions. The present sequence represents a gene differentially
CC   expressed in granulocytes. Note: The sequence data for this patent did
CC   not form part of the printed specification, but was obtained in
CC   electronic format directly from WIPO at
CC   ftp.wipo.int/pub/published_pct_sequences

XX
PT   New polynucleotides and polypeptides for predicting the activity of
PT   compounds that interact with protein tyrosine kinases and/or protein
PT   tyrosine kinase pathways.
XX
PS   Claim 2; SEQ ID NO 85; 139pp; English.
XX
CC   The present invention describes a predictor set comprising a plurality of
CC   polynucleotides or polypeptides whose expression pattern is predictive of
CC   the response of cells to treatment with a compound that modulates protein
CC   tyrosine kinase activity or members of the protein tyrosine kinase
CC   pathway. Also described: (1) predicting whether a compound is capable of
CC   modulating the activity of cells, comprising obtaining a sample of cells,
CC   determining whether the cells express a plurality of markers, and
CC   correlating the expression of the markers to the compound's ability to
CC   modulate the activity of the cells; (2) a plurality of cell lines for
CC   identifying polynucleotides and polypeptides whose expression levels
CC   correlate with compound sensitivity or resistance of cells associated
CC   with a disease state; and (3) identifying polynucleotides and
CC   polypeptides that predict compound sensitivity or resistance of cells
CC   associated with a disease state, comprising subjecting the plurality of
CC   cell lines to one or more compounds, analysing the expression pattern of
CC   a microarray of polynucleotides or polypeptides, and selecting
CC   polynucleotides or polypeptides that predict the sensitivity or
CC   resistance of cells associated with a disease state by using the
CC   expression pattern of the microarray. The polynucleotides and
CC   polypeptides have cytostatic activities, and can be used in gene therapy.
CC   The polynucleotides and polypeptides are useful in predicting the
CC   activity of compounds that interact with protein tyrosine kinases and/or
CC   protein tyrosine kinase pathways. These may be used in determining drug
CC   sensitivity in patients to allow the development of individualized
CC   genetic profiles which aid in treating diseases and disorders (e.g.
CC   cancer) based on patient response at a molecular level. The present
CC   sequence is used in the exemplification of the present invention.

PT Polynucleotides encoding digestive system antigens, useful for
PT diagnosing, treating, preventing and/or prognozing disorders of the
PT digestive system, particularly cancer and cancer metastases.
XX
PS Disclosure; SEQ ID NO 2950; 986pp; English.
XX
CC The present invention provides the protein and coding sequences of a
CC number of human digestive system antigens. These can be used in the
CC diagnosis, treatment and prevention of digestive system disorders,
CC including cancer, Meckel's diverticulum, bacterial or parasitic
CC infections, appendicitis, Hirschsprung's disease, chronic colitis or
CC ulcerative colitis. The present sequence is a genomic DNA fragment
CC encoding a digestive system antigen of the invention

XX
PT Nucleic acids encoding human immune/hematopoietic antigen polypeptides,
PT useful for preventing, diagnosing and/or treating cancers and metastasis.
XX
PS Disclosure; SEQ ID NO 27977; 3071pp + Sequence Listing; English.
XX
CC AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I)
CC amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic
CC activity, and can be used in gene therapy and vaccine production. (I)
CC proteins and polynucleotides may be used in the prevention, diagnosis and
CC treatment of diseases associated with inappropriate (I) expression. For
CC example, they may be used to treat disorders associated with decreased
CC expression by rectifying mutations or deletions in a patient's genome
CC that affect the activity of (I) by expressing inactive proteins or to
CC supplement the patients own production of (I). Additionally, (I)
CC polynucleotides may be used to produce the secreted (I), by inserting the
CC nucleic acids into a host cell and culturing the cell to express the
CC protein. (I) proteins and polynucleotides may be used to prevent,
CC diagnose and treat immune/haematopoietic-related diseases, especially
CC cancers and cancer metastases of haematopoietic-derived cells. AAK64703
CC to AAK87694 represent human immune/haematopoietic antigen genomic
CC sequences from the present invention. AAK54942 to AAK54950 and AAM82169
CC represent sequences used in the exemplification of the present invention

PT Novel 71 isolated secreted polypeptides and polynucleotides encoding the
PT polypeptides, useful for treating Huntington's disease, sepsis,
PT meningitis, thrombocytopenia, hemolytic anemia, rheumatoid arthritis,
PT asthma.
XX
PS Example 2; Page 1440-1445; 1478pp; English.
XX
CC The invention relates to an isolated nucleic acid molecule (or its
CC fragment, homologue complement or allelic variant) encoding a human
CC secreted protein (and its fragment, domain, epitope, variant, secreted
CC form and species variant). Also included are a recombinant vector
CC comprising the nucleic acid, a recombinant host cell comprising the
CC vector, an antibody against the secreted protein, a recombinant host cell
CC that expresses the secreted protein and a method of identifying a binding
CC partner of the secreted protein. The nucleic acid and protein are used to
CC prevent, diagnose, treat or ameliorate a medical condition in e.g.
CC humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep for
CC example autoimmune diseases e.g. rheumatoid arthritis, hyperproliferative
CC disorders e.g. neoplasms of the breast or liver, cardiovascular disorders
CC e.g. cardiac arrest, cerebrovascular disorders e.g. cerebral ischaemia,
CC angiogenesis, nervous system disorders e.g. Alzheimer's disease,
CC infections caused by bacteria, viruses and fungi and ocular disorders
CC e.g. corneal infection. Many other diseases and disorders are listed in
CC the specification. The polypeptides can also be used to aid wound healing
CC an epithelial cell proliferation, to prevent skin aging due to sunburn,
CC to maintain organs before transplantation, for supporting cell culture of
CC primary tissues, to regenerate tissues and in chemotaxis. The
CC polypeptides can also be used as a food additive or preservative to
CC increase or decrease storage capabilities. The present sequence
CC represents a ds DNA fragment of the gene for a novel human secreted
CC protein of the invention

PT   New isolated prostate leucine zipper (PrLZ) nucleic acid molecule, useful
PT   in diagnosing, prognosticating and/or treating cancers or high grade
PT   dysplasias affecting PrLZ-positive tissues, such as those in the
PT   prostate.
XX
PS   Claim 23; SEQ ID NO 2; 103pp; English.
XX
CC   The invention relates to a novel isolated nucleic acid molecule that
CC   regulats the expression of prostate-expressed genes, specifically the
CC   prostate leucine zipper (PrLZ) gene. A polypeptide of the invention has
CC   cytostatic activity, and may act as a leucine zipper antagonist. The
CC   agent or vector that inhibits the expression or activity of PrLZ is
CC   useful for the treatment of cancer or high grade dysplasia, and for the
CC   preparation of a medicament for the treatment of cancer or high grade
CC   dysplasia, where the cancer or dysplasia affects prostate tissue, breast
CC   tissue, renal tissue, tissue within the gastrointestinal tract, or any
CC   other PrLZ-positive tissue. The methods and compositions of the present
CC   invention are also useful for the diagnosis and prognosis of such
CC   cancers. The present sequence represents a genomic sequence that
CC   regulates the expression of PrLZ, an additional 5' flanking sequence, the
CC   PrLZ gene, and 3' flanking sequence.

XX
PT Nucleic acids encoding human immune/hematopoietic antigen polypeptides,
PT useful for preventing, diagnosing and/or treating cancers and metastasis.
XX
PS Disclosure; SEQ ID NO 27978; 3071pp + Sequence Listing; English.
XX
CC AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I)
CC amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic
CC activity, and can be used in gene therapy and vaccine production. (I)
CC proteins and polynucleotides may be used in the prevention, diagnosis and
CC treatment of diseases associated with inappropriate (I) expression. For
CC example, they may be used to treat disorders associated with decreased
CC expression by rectifying mutations or deletions in a patient's genome
CC that affect the activity of (I) by expressing inactive proteins or to
CC supplement the patients own production of (I). Additionally, (I)
CC polynucleotides may be used to produce the secreted (I), by inserting the
CC nucleic acids into a host cell and culturing the cell to express the
CC protein. (I) proteins and polynucleotides may be used to prevent,
CC diagnose and treat immune/haematopoietic-related diseases, especially
CC cancers and cancer metastases of haematopoietic-derived cells. AAK64703
CC to AAK87694 represent human immune/haematopoietic antigen genomic
CC sequences from the present invention. AAK54942 to AAK54950 and AAM82169
CC represent sequences used in the exemplification of the present invention

PT   polypeptides, useful for treating Huntington's disease, sepsis,
PT   meningitis, thrombocytopenia, hemolytic anemia, rheumatoid arthritis,
PT   asthma.
XX
PS   Example 2; Page 1434-1440; 1478pp; English.
XX
CC   The invention relates to an isolated nucleic acid molecule (or its
CC   fragment, homologue complement or allelic variant) encoding a human
CC   secreted protein (and its fragment, domain, epitope, variant, secreted
CC   form and species variant). Also included are a recombinant vector
CC   comprising the nucleic acid, a recombinant host cell comprising the
CC   vector, an antibody against the secreted protein, a recombinant host cell
CC   that expresses the secreted protein and a method of identifying a binding
CC   partner of the secreted protein. The nucleic acid and protein are used to
CC   prevent, diagnose, treat or ameliorate a medical condition in e.g.
CC   humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep for
CC   example autoimmune diseases e.g. rheumatoid arthritis, hyperproliferative
CC   disorders e.g. neoplasms of the breast or liver, cardiovascular disorders
CC   e.g. cardiac arrest, cerebrovascular disorders e.g. cerebral ischaemia,
CC   angiogenesis, nervous system disorders e.g. Alzheimer's disease,
CC   infections caused by bacteria, viruses and fungi and ocular disorders
CC   e.g. corneal infection. Many other diseases and disorders are listed in
CC   the specification. The polypeptides can also be used to aid wound healing
CC   an epithelial cell proliferation, to prevent skin aging due to sunburn,
CC   to maintain organs before transplantation, for supporting cell culture of
CC   primary tissues, to regenerate tissues and in chemotaxis. The
CC   polypeptides can also be used as a food additive or preservative to
CC   increase or decrease storage capabilities. The present sequence
CC   represents a ds DNA fragment of the gene for a novel human secreted
CC   protein of the invention

PT Identifying p53 pathway modulators for treating or diagnosing disorders
PT with defective p53 function e.g. breast cancer, by providing an assay
PT system having a purified cotransporter interactor protein (CIP)
PT polypeptide or nucleic acid.
XX
PS Disclosure; Page 38-101; 123pp; English.
XX
CC The invention relates to a method of Identifying p53 pathway modulating
CC agent. The method involves contacting a test agent with an assay system
CC comprising a purified cation Cl- cotransporter interactor protein (CIP)
CC polypeptide or polynucleotide, or their functionally active fragment or
CC derivative. The method is useful for identifying modulators of the p53
CC pathway particularly for identifying agents for treating disorders (e.g.
CC breast cancer) associated with defective p53 function. Modulators of the
CC invention are useful as targets for novel therapeutics. CIP sequences are
CC useful as modifiers of the p53 pathway, and as therapeutic targets for
CC disorders associated with defective p53 function e.g. angiogenic,
CC apoptotic or cell proliferation disorders. The invention is useful in
CC gene therapy. The present sequence is human CIP DNA

PS Claim 1; SEQ ID NO 31; 114pp; English.
XX
CC The invention relates to detecting (M1) granulocyte (GC) activation
CC (GCA), by detecting the level of expression of gene(s) (Gs) identified by
CC DNA chip analysis as given in the specification, and comparing the
CC expression level to an expression level in an unactivated GC, where
CC differential expression of Gs is indicative of GCA. Also included are
CC modulating (M2) GA by contacting GC with an agent that alters the
CC expression of at least one gene in Gs; (2) screening (M3) for an agent
CC capable of modulating GCA or an inflammation (especially chronic) in a
CC tissue, an allergic response in a subject, exposure of a subject to a
CC pathogen or sterile inflammatory disease using the gene expression
CC profile; (3) detecting (M4) an inflammation (especially chronic) in a
CC tissue, an allergic response in a subject, exposure of a subject to a
CC pathogen or sterile inflammatory disease, by detecting the level of
CC expression in a sample of the tissue of gene(s) from Gs, where the level
CC of expression of the gene is indicative of inflammation; (4) treating
CC (M5) an inflammation (especially chronic) or in a tissue, an allergic
CC response in a subject, exposure of a subject to a pathogen or sterile
CC inflammatory disease, by contacting a tissue having inflammation with an
CC agent that modulates the expression of gene(s) from Gs in the tissue. M1
CC is useful for detecting GCA; M2 is useful for modulating GA; M3 is useful
CC for screening an agent capable of modulating GCA preferably in an
CC inflammation in a tissue; M4 is useful for detecting an inflammation
CC (especially chronic) in a tissue, an allergic response in a subject,
CC exposure of a subject to a pathogen or sterile inflammatory disease (e.g.
CC psoriasis, rheumatoid arthritis, glomerulonephritis, asthma, thrombosis,
CC cardiac reperfusion injury, renal reperfusion injury, ARDS, adult
CC respiratory distress syndrome, inflammatory bowel disease, Crohn's
CC disease, ulcerative colitis, periodontal disease; also bacterial
CC infection, viral infection, parasitic infection, protozoal infection,
CC fungal infection and M5 is useful for treating one of the above
CC conditions. The present sequence represents a gene differentially
CC expressed in granulocytes. Note: The sequence data for this patent did
CC not form part of the printed specification, but was obtained in
CC electronic format directly from WIPO at
CC ftp.wipo.int/pub/published_pct_sequences

XX
PT   Early detection of soft tissue sarcoma comprises determining expression
PT   of a gene in a first soft tissue sample and a normal soft tissue sample
PT   and comparing the gene expression, also useful in treating soft tissue
PT   sarcoma.
XX
PS   Example 2; SEQ ID NO 1357; 210pp; English.
XX
CC   The invention relates to a novel method for detecting soft tissue sarcoma
CC   which comprises obtaining a first soft tissue sample from an individual
CC   and a normal soft tissue sample from the same or different individual,
CC   determining the expression of a gene in both samples and comparing the
CC   expression of the gene in both soft tissue samples, where a higher level
CC   of protein expression in the first soft tissue sample indicates the
CC   presence of soft tissue sarcoma. The method of the invention has
CC   cytostatic applications and may be useful for detecting soft tissue
CC   sarcoma, possibly via gene therapy or vaccine production. The nucleic
CC   acid sequences may be useful in diagnostic and screening applications.
CC   The current sequence is that of a human soft tissue sarcoma-upregulated
CC   DNA of the invention. The current sequence is not shown within the
CC   specification per se but was submitted in CD format by the inventor.

CC   NM_019900, NM_019901, NM_019902, NM_019862, NM_019898, NM_019899) and
CC   their complementary sequences, or a sequence (S1) chosen from 87
CC   sequences and their complements. The chemical pretreatment is bisulphite
CC   treatment to convert cytosines (but not methyl-cytosines) into uracils.
CC   Also included are an oligomer (II) in particular an oligonucleotide or a
CC   peptide nucleic acid (PNA)-oligomer, comprising in each case at least one
CC   base sequence having a length of 9 nucleotides which hybridises to or is
CC   identical to a chemically pretreated DNA of genes associated with
CC   pharmacogenomics and their complements, arranged in an array for
CC   analysing diseases associated with the methylation state (CpG) and/or
CC   detecting SNPs (single nucleotide polymorphisms) of the 87 sequences. The
CC   oligomers may also be used as PCR primers. The set of 87 nucleic acids
CC   and their complements is useful for diagnosis and therapy of solid
CC   tumours and cancer. The present sequence represents one the 87 DNA
CC   sequences or its complement. Note: The sequence data for this patent did
CC   not form part of the printed specification, but was obtained in
CC   electronic format directly from WIPO at
CC   ftp.wipo.int/pub/published_pct_sequences

PT Nucleic acids encoding human immune/hematopoietic antigen polypeptides,
PT useful for preventing, diagnosing and/or treating cancers and metastasis.
XX
PS Disclosure; SEQ ID NO 27977; 3071pp + Sequence Listing; English.
XX
CC AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I)
CC amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic
CC activity, and can be used in gene therapy and vaccine production. (I)
CC proteins and polynucleotides may be used in the prevention, diagnosis and
CC treatment of diseases associated with inappropriate (I) expression. For
CC example, they may be used to treat disorders associated with decreased
CC expression by rectifying mutations or deletions in a patient's genome
CC that affect the activity of (I) by expressing inactive proteins or to
CC supplement the patients own production of (I). Additionally, (I)
CC polynucleotides may be used to produce the secreted (I), by inserting the
CC nucleic acids into a host cell and culturing the cell to express the
CC protein. (I) proteins and polynucleotides may be used to prevent,
CC diagnose and treat immune/haematopoietic-related diseases, especially
CC cancers and cancer metastases of haematopoietic-derived cells. AAK64703
CC to AAK87694 represent human immune/haematopoietic antigen genomic
CC sequences from the present invention. AAK54942 to AAK54950 and AAM82169
CC represent sequences used in the exemplification of the present invention

PT Novel 71 isolated secreted polypeptides and polynucleotides encoding the
PT polypeptides, useful for treating Huntington's disease, sepsis,
PT meningitis, thrombocytopenia, hemolytic anemia, rheumatoid arthritis,
PT asthma.
XX
PS Example 2; Page 1440-1445; 1478pp; English.
XX
CC The invention relates to an isolated nucleic acid molecule (or its
CC fragment, homologue complement or allelic variant) encoding a human
CC secreted protein (and its fragment, domain, epitope, variant, secreted
CC form and species variant). Also included are a recombinant vector
CC comprising the nucleic acid, a recombinant host cell comprising the
CC vector, an antibody against the secreted protein, a recombinant host cell
CC that expresses the secreted protein and a method of identifying a binding
CC partner of the secreted protein. The nucleic acid and protein are used to
CC prevent, diagnose, treat or ameliorate a medical condition in e.g.
CC humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep for
CC example autoimmune diseases e.g. rheumatoid arthritis, hyperproliferative
CC disorders e.g. neoplasms of the breast or liver, cardiovascular disorders
CC e.g. cardiac arrest, cerebrovascular disorders e.g. cerebral ischaemia,
CC angiogenesis, nervous system disorders e.g. Alzheimer's disease,
CC infections caused by bacteria, viruses and fungi and ocular disorders
CC e.g. corneal infection. Many other diseases and disorders are listed in
CC the specification. The polypeptides can also be used to aid wound healing
CC an epithelial cell proliferation, to prevent skin aging due to sunburn,
CC to maintain organs before transplantation, for supporting cell culture of
CC primary tissues, to regenerate tissues and in chemotaxis. The
CC polypeptides can also be used as a food additive or preservative to
CC increase or decrease storage capabilities. The present sequence
CC represents a ds DNA fragment of the gene for a novel human secreted
CC protein of the invention

PS   Claim 1; SEQ ID NO 2007; 28pp; English.
XX
CC   The invention relates to a novel polynucleotide encoding a guanosine
CC   triphosphate-binding protein coupled receptor (GPCR). A polynucleotide of
CC   the invention may have a use in gene therapy. The polynucleotide and
CC   polypeptide are useful for preparing a composition for treating a patient
CC   in need of increased or suppressed activity or expression of the
CC   guanosine triphosphate-binding protein coupled receptor. The
CC   polynucleotide sequences shown in ADC85548-ADC87616 encode GPCR's of the
CC   invention.

PT Determining susceptibility of an individual to joint space narrowing,
PT osteophyte development and/or joint pain comprises identifying whether
PT the individual has at least one polymorphism in a polynucleotide encoding
PT a protein.
XX
PS Disclosure; SEQ ID NO 303; 297pp; English.
XX
CC The invention relates to a method of determining susceptibility of an
CC individual to joint space narrowing and/or osteophyte development and/or
CC joint pain comprising identifying whether the individual has at least one
CC polymorphism in a polynucleotide encoding at least one of the protein
CC listed in the specification. The methods, composition and agent are
CC useful for modulating the susceptibility of an individual to joint space
CC narrowing and/or osteophyte development and/or joint pain that is
CC associated with a disease, preferably osteoarthritis. The cell line and
CC the non-human animal are useful for screening for an agent for diagnosing
CC an individual having susceptibility to joint space narrowing and/or
CC osteophyte development and/or joint pain. This sequence corresponds to
CC the polynucleotide encoding a protein listed in the specification. (Note:
CC The sequence data for this patent did not form part of the printed
CC specification but was obtained in electronic format directly from WIPO at
CC ftp.wipo.int/pub/published_pct_sequences).

PS   claim 16; seqid 199; 310pp; English.
XX
CC   The invention relates to an isolated nucleic acid comprising at least 10
CC   contiguous nucleotides of any of the 233 polynucleotide sequences given
CC   in the specification, or its complement. The nucleic acids encode cancer-
CC   associated proteins. Also included are an expression vector comprising
CC   the isolated nucleic acid cited above, a host cell comprising the above
CC   recombinant nucleic acid or expression vector, a microarray for detecting
CC   a cancer-associated (CA) nucleic acid comprising at least one probe
CC   comprising at least 10 contiguous nucleotides of any of the above-
CC   mentioned nucleotide sequences, an isolated polypeptide (encoded within
CC   an open reading frame of a CA sequence selected from any of the 95
CC   polynucleotide sequences as mentioned in the specification, or its
CC   complement), an isolated antibody, (or its antigen binding fragment) that
CC   binds to the above polypeptide, a hybridoma that produces the above
CC   monoclonal antibody, a pharmaceutical composition comprising the above
CC   antibody and a pharmaceutical excipient, a kit for detecting cancer
CC   cells(comprising the antibody cited above, methods for diagnosing cancer
CC   or for detecting the presence or absence of cancer cells in an
CC   individual, a method for inhibiting growth of cancer cells in an
CC   individual, a method for delivering a therapeutic agent to cancer cells
CC   in an individual, an electronic library comprising the above
CC   polynucleotide or polypeptide (or their fragments), methods of screening
CC   for anticancer activity or for a bioactive agent capable of modulating
CC   the activity of a CA protein (CAP), methods for detecting cancer
CC   associated with expression of a polypeptide in a test cell sample, a
CC   method for treating cancers and a method for inhibiting the expression of
CC   CA gene in a cell. The composition and methods are useful for detecting,
CC   diagnosing, preventing and treating cancers, especially lymphoma and
CC   leukaemia. These may also be used in screening for agents that modulate
CC   cancer. The present sequence is a human CAP genomic sequence. Note: The
CC   sequence data for this patent did not form part of the printed
CC   specification, but was obtained in electronic format directly from WIPO
CC   at ftp.wipo.int/pub/published_pct_sequences

XX
PT Nucleic acids encoding human immune/hematopoietic antigen polypeptides,
PT useful for preventing, diagnosing and/or treating cancers and metastasis.
XX
PS Disclosure; SEQ ID NO 27978; 3071pp + Sequence Listing; English.
XX
CC AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I)
CC amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic
CC activity, and can be used in gene therapy and vaccine production. (I)
CC proteins and polynucleotides may be used in the prevention, diagnosis and
CC treatment of diseases associated with inappropriate (I) expression. For
CC example, they may be used to treat disorders associated with decreased
CC expression by rectifying mutations or deletions in a patient's genome
CC that affect the activity of (I) by expressing inactive proteins or to
CC supplement the patients own production of (I). Additionally, (I)
CC polynucleotides may be used to produce the secreted (I), by inserting the
CC nucleic acids into a host cell and culturing the cell to express the
CC protein. (I) proteins and polynucleotides may be used to prevent,
CC diagnose and treat immune/haematopoietic-related diseases, especially
CC cancers and cancer metastases of haematopoietic-derived cells. AAK64703
CC to AAK87694 represent human immune/haematopoietic antigen genomic
CC sequences from the present invention. AAK54942 to AAK54950 and AAM82169
CC represent sequences used in the exemplification of the present invention

XX
CC   The invention relates to an isolated nucleic acid molecule (or its
CC   fragment, homologue complement or allelic variant) encoding a human
CC   secreted protein (and its fragment, domain, epitope, variant, secreted
CC   form and species variant). Also included are a recombinant vector
CC   comprising the nucleic acid, a recombinant host cell comprising the
CC   vector, an antibody against the secreted protein, a recombinant host cell
CC   that expresses the secreted protein and a method of identifying a binding
CC   partner of the secreted protein. The nucleic acid and protein are used to
CC   prevent, diagnose, treat or ameliorate a medical condition in e.g.
CC   humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep for
CC   example autoimmune diseases e.g. rheumatoid arthritis, hyperproliferative
CC   disorders e.g. neoplasms of the breast or liver, cardiovascular disorders
CC   e.g. cardiac arrest, cerebrovascular disorders e.g. cerebral ischaemia,
CC   angiogenesis, nervous system disorders e.g. Alzheimer's disease,
CC   infections caused by bacteria, viruses and fungi and ocular disorders
CC   e.g. corneal infection. Many other diseases and disorders are listed in
CC   the specification. The polypeptides can also be used to aid wound healing
CC   an epithelial cell proliferation, to prevent skin aging due to sunburn,
CC   to maintain organs before transplantation, for supporting cell culture of
CC   primary tissues, to regenerate tissues and in chemotaxis. The
CC   polypeptides can also be used as a food additive or preservative to
CC   increase or decrease storage capabilities. The present sequence
CC   represents a ds DNA fragment of the gene for a novel human secreted
CC   protein of the invention

PT New nucleic acid, oligonucleotides and peptide nucleic acid-oligomers,
PT useful for detecting cytosine methylation state of genes associated with
PT pharmacogenomics and for therapy of diseases e.g. cancer.
XX
PS Claim 1; SEQ ID NO 11; 24pp; English.
XX
CC The invention relates to a nucleic acid comprising a sequence at least 18
CC bases in length of a segment of the chemically pretreated DNA of genes
CC associated with pharmacogenomics according to one of the sequences of the
CC genes ALDH6 (NM_000693), CYP11A (NM_000781), CYP11B1 (NM_000497), CYP3A3
CC (NM_000776 and NM_017460), DPYD (NM_000110), EPHX2 (NM_001979), OCLN
CC (NM_002538), TXNRD1 (NM_003330), UGT8 (NM_003360), MRP (NM_004996,
CC NM_019900, NM_019901, NM_019902, NM_019862, NM_019898, NM_019899) and
CC their complementary sequences, or a sequence (S1) chosen from 87
CC sequences and their complements. The chemical pretreatment is bisulphite
CC treatment to convert cytosines (but not methyl-cytosines) into uracils.
CC Also included are an oligomer (II) in particular an oligonucleotide or a
CC peptide nucleic acid (PNA)-oligomer, comprising in each case at least one
CC base sequence having a length of 9 nucleotides which hybridises to or is
CC identical to a chemically pretreated DNA of genes associated with
CC pharmacogenomics and their complements, arranged in an array for
CC analysing diseases associated with the methylation state (CpG) and/or
CC detecting SNPs (single nucleotide polymorphisms) of the 87 sequences. The
CC oligomers may also be used as PCR primers. The set of 87 nucleic acids
CC and their complements is useful for diagnosis and therapy of solid
CC tumours and cancer. The present sequence represents one the 87 DNA
CC sequences or its complement. Note: The sequence data for this patent did
CC not form part of the printed specification, but was obtained in
CC electronic format directly from WIPO at
CC ftp.wipo.int/pub/published_pct_sequences

CC   Two cosmids, 4F7 and 7H12, were identified by screening cosmid libraries
CC   with a sequence from the 2nd transmembrane domain of a rat D2 dopamine
CC   recptor cDNA. The cosmids had potential structural homology to G-protein
CC   receptor gene family as well as several loci on chromosome 11. A highly
CC   repetitive element was also detected in the region of of overlap of the 2
CC   cosmids and was subcloned into Bluescript and its DNA sequence
CC   determined. It revealed a highly degenerate repetative hexamer motif
CC   spanning 438 bp consisting of 73 repeats. (Updated on 25-MAR-2003 to
CC   correct PN field.)

PT   Novel human cancer associated protein encoded within open reading frame
```

```
PT   of cancer associated gene, useful as targets for diagnosing cancer.
XX
PS   Disclosure; SEQ ID NO 123; 182pp; English.
XX
CC   The invention relates to cancer-associated proteins (CAP) and the cancer-
CC   associated (CA) nucleic acids encoding them. The invention also relates
CC   to a method for treating cancers involving administering to a patient an
CC   inhibitor of CAP, and a method of screening for anticancer activity in a
CC   potential drug involving providing a cell that expresses a CA gene,
CC   contacting a tissue sample derived from a cancer cell with an anticancer
CC   drug candidate and monitoring the effect of the anticancer drug candidate
CC   on expression of the CA gene. The CAP proteins are useful for detecting
CC   cancer associated with expression of a CAP protein in a test cell sample
CC   and for screening for a bioactive agent capable of modulating the
CC   activity of a CAP protein. The CA nucleic acids are useful for diagnosing
CC   cancer, involving determining the expression of a CA nucleic acid in a
CC   tissue. This sequence represents a murine CA gene of the invention. Note:
CC   The sequence data for this patent did not form part of the printed
CC   specification, but was obtained in electronic format directly from WIPO
CC   at ftp.wipo.int/pub/published_pct_sequences

PT   New polynucleotide, useful for preparing a composition for treating a
PT   patient in need of increased or suppressed activity or expression of the
PT   guanosine triphosphate-binding protein coupled receptor.
XX
PS   Claim 1; SEQ ID NO 607; 28pp; English.
XX
CC   The invention relates to a novel polynucleotide encoding a guanosine
CC   triphosphate-binding protein coupled receptor (GPCR). A polynucleotide of
CC   the invention may have a use in gene therapy. The polynucleotide and
CC   polypeptide are useful for preparing a composition for treating a patient
CC   in need of increased or suppressed activity or expression of the
CC   guanosine triphosphate-binding protein coupled receptor. The
CC   polynucleotide sequences shown in ADC85548-ADC87616 encode GPCR's of the
CC   invention.

XX
PT   Determining susceptibility of an individual to joint space narrowing,
PT   osteophyte development and/or joint pain comprises identifying whether
PT   the individual has at least one polymorphism in a polynucleotide encoding
PT   a protein.
XX
PS   Disclosure; SEQ ID NO 303; 297pp; English.
XX
CC   The invention relates to a method of determining susceptibility of an
CC   individual to joint space narrowing and/or osteophyte development and/or
CC   joint pain comprising identifying whether the individual has at least one
CC   polymorphism in a polynucleotide encoding at least one of the protein
CC   listed in the specification. The methods, composition and agent are
CC   useful for modulating the susceptibility of an individual to joint space
CC   narrowing and/or osteophyte development and/or joint pain that is
CC   associated with a disease, preferably osteoarthritis. The cell line and
CC   the non-human animal are useful for screening for an agent for diagnosing
CC   an individual having susceptibility to joint space narrowing and/or
CC   osteophyte development and/or joint pain. This sequence corresponds to
CC   the polynucleotide encoding a protein listed in the specification. (Note:
CC   The sequence data for this patent did not form part of the printed
CC   specification but was obtained in electronic format directly from WIPO at
CC   ftp.wipo.int/pub/published_pct_sequences).

PT   New polynucleotide, useful for preparing a composition for treating a
PT   patient in need of increased or suppressed activity or expression of the
PT   guanosine triphosphate-binding protein coupled receptor.
XX
PS   Claim 1; SEQ ID NO 2017; 28pp; English.
XX
CC   The invention relates to a novel polynucleotide encoding a guanosine
CC   triphosphate-binding protein coupled receptor (GPCR). A polynucleotide of
CC   the invention may have a use in gene therapy. The polynucleotide and
CC   polypeptide are useful for preparing a composition for treating a patient
CC   in need of increased or suppressed activity or expression of the
CC   guanosine triphosphate-binding protein coupled receptor. The
CC   polynucleotide sequences shown in ADC85548-ADC87616 encode GPCR's of the
CC   invention.

PT   New isolated Beta-lactin nucleic acid promoter molecule from shrimp,
PT   useful for imparting resistance against a virus and increasing stress
PT   tolerance in an animal and for regulating growth of an animal.
XX
PS   Claim 52; Page 14-15; 97pp; English.
XX
CC   The present sequence is that of the promoter region of the Pacific white
CC   shrimp skeletal muscle actin gene. This promoter is suitable for inducing
CC   expression of a protein encoded by a nucleic acid molecular operably
CC   associated with the promoter molecule in an expression vector. It
CC   contains promoter-associated TATA and CAAT boxes approximately 500 bp
CC   upstream from the translation start site. A unique characteristic of the
CC   promoter are CACA-rich and CATA-rich regions located upstream of the TATA
CC   and CAAT boxes. The invention relates to actin and beta-actin promoter
CC   molecules from shrimp, expression cassettes including the promoter,
CC   expression vectors, host cells and transgenic animals transduced with the
CC   promoter. Methods for imparting resistance to a pathogen, for regulating
CC   growth, for improving stress tolerance, and for increasing cold tolerance
CC   in an animal, especially a shrimp, involve transforming the animal with a
CC   nucleic acid construct including the isolated actin and beta-actin
CC   promoter molecules of the invention

PT   New isolated nucleic acid comprising neocentromere sequences from
PT   eukaryotic chromosome - used to produce replicable, segregating
PT   artificial chromosomes that can carry large amounts of DNA for gene
PT   therapy.
XX
PS   Claim 8; Fig 6; 540pp; English.
XX
CC   The present sequence represents the HC-contig derived from normal human
CC   chromosome 10, 10q25.2 region. This region can be naturally mutated to
CC   produce an unusual chromosomal marker referred to as mardel(10). The
CC   mardel(10) marker is mitotically stable and contains a functional
CC   neocentromere at a location regarded as non-centromeric. This
CC   neocentromere maps to q25.2 on chromosome 10. The specification describes
CC   nucleic acid sequences derived from a eukaryotic chromosome, including a
CC   neocentromere or its functional derivative or hybrid, that are able, in a
CC   compatible cell, of replicating, acting as extra-chromosomal element and
CC   segregating during cell division. The sequences can be used to construct
CC   artificial chromosomes for use in gene therapy comprising a replicable,
CC   segregating nucleic acid that confers a specific phenotype on cells.
CC   Human artificial chromosomes can propagate in human cells and carry large
CC   amounts of DNA (e.g. therapeutic genes), and, being extra-chromosomal,
CC   they are not mutagenic. The artificial chromosomes are also useful for
CC   generation of transgenic plants and animals, in production of proteins
CC   and to make diagnostic reagents, e.g. for expression of cytokines,
CC   receptors and growth factors, or to increase the copy number of a gene in
CC   a cell. The constructs may also be used for functional and structural
CC   analysis of chromosomes

PT   Novel polynucleotide used to develop products for detecting
PT   susceptibility to, diagnosis, prognosis and therapy of prostate cancer.
XX
PS   Claim 1; Page 277-306; 339pp; English.
XX
CC   This sequence represents the genomic DNA sequence encoding human prostate
CC   carcinoma tumour antigen-1 (PCTA-1). At least three PCTA-1 cDNAs
CC   (AAA10226, AAA10227, AAA10228) have been identified all of which comprise
CC   exons 1, 2, 3, 4, 5, 6, 7, 8, and additionally either contain exon 9,
CC   exons 6bis and 9, or exons 9bis and 9ter. PCTA-1 is a human homologue of
CC   rat galectin-8, which can mediate both cell-cell and cell-matrix
CC   interactions. 125 biallelic markers were identified in the genomic
CC   sequence, with 40 biallelic markers being located in exonic regions. Six
CC   of these alter the amino acid sequence of a PCTA-1 protein. 43 markers
CC   were found in the 5' regulatory region, including 16 in the promoter, 39
CC   in intronic sequences, and 3 in the 3' regulatory region. Alleles
CC   containing certain biallelic markers are associated with prostate cancer.
CC   These polymorphisms can be used as the basis of methods for determining
CC   genetic predisposition to prostate cancer, for diagnosis of this cancer
CC   and for the prognosis/detection of an eventual treatment response to
CC   therapeutic agents against prostate cancer. They can be used to design of
CC   drug screening protocols to provide accurate and efficient evaluation of
CC   therapeutic and side-effect potential of new or already existing
CC   medicaments, as well as for screening molecules which modulate or inhibit
CC   the expression of the PCTA-1 gene, preferably those active against
CC   prostate cancer

PT New isolated nucleic acid comprising neocentromere sequences from
PT eukaryotic chromosome - used to produce replicable, segregating
PT artificial chromosomes that can carry large amounts of DNA for gene
PT therapy.
XX
PS Claim 9; Fig 16A; 540pp; English.
XX
CC The present sequence represents the NC-contig derived from a mutated
CC human chromosome 10, 10q25.2 region. The sequence contains an unusual
CC chromosomal marker referred to as mardel(10). The mardel(10) marker is
CC mitotically stable and contains a functional neocentromere at a location
CC regarded as non-centromeric. This neocentromere maps to q25.2 on
CC chromosome 10. The specification describes nucleic acid sequences derived
CC from a eukaryotic chromosome, including a neocentromere or its functional
CC derivative or hybrid, that are able, in a compatible cell, of
CC replicating, acting as extra-chromosomal element and segregating during
CC cell division. The sequences can be used to construct artificial
CC chromosomes for use in gene therapy comprising a replicable, segregating
CC nucleic acid that confers a specific phenotype on cells. Human artificial
CC chromosomes can propagate in human cells and carry large amounts of DNA
CC (e.g. therapeutic genes), and, being extra-chromosomal, they are not
CC mutagenic. The artificial chromosomes are also useful for generation of
CC transgenic plants and animals, in production of proteins and to make
CC diagnostic reagents, e.g. for expression of cytokines, receptors and
CC growth factors, or to increase the copy number of a gene in a cell. The
CC constructs may also be used for functional and structural analysis of
CC chromosomes

PT   New polynucleotide, useful for preparing a composition for treating a
PT   patient in need of increased or suppressed activity or expression of the
PT   guanosine triphosphate-binding protein coupled receptor.
XX
PS   Claim 1; SEQ ID NO 2017; 28pp; English.
XX
CC   The invention relates to a novel polynucleotide encoding a guanosine
CC   triphosphate-binding protein coupled receptor (GPCR). A polynucleotide of
CC   the invention may have a use in gene therapy. The polynucleotide and
CC   polypeptide are useful for preparing a composition for treating a patient
CC   in need of increased or suppressed activity or expression of the
CC   guanosine triphosphate-binding protein coupled receptor. The
CC   polynucleotide sequences shown in ADC85548-ADC87616 encode GPCR's of the
CC   invention.

PT New carcinoma associated nucleic acids and proteins, useful for screening
PT drug candidates, or for diagnosing and treating carcinomas, e.g.
PT lymphoma, breast cancer, prostate cancer or leukemia.
XX
PS Claim 1; SEQ ID NO 232; 793pp; English.
XX
CC This invention relates to novel recombinant nucleic acids for use in
CC diagnosis and treatment of cancer, especially carcinomas, as well as the
CC use of compositions in screening methods. The compositions of the
CC invention may have cytostatic activity whilst the disclosed sequences may
CC be useful for gene therapy. The carcinoma associated nucleic acids and
CC proteins are useful for diagnosing and treating carcinomas, for example
CC lymphoma, breast cancer, prostate cancer or leukaemia, or for screening
CC drug candidates or bioactive agents capable of binding to, or modulating
CC the activity of, a carcinoma associated protein. The present sequence is
CC the genomic DNA sequence of the human SYK gene which is a carcinoma
CC associated gene of the invention.

PT   New recombinant nucleic acid encoding carcinoma associated protein,
PT   useful for preparing compositions for treating carcinomas.
XX
PS   Claim 1; SEQ ID NO 1244; 245pp; English.
XX
CC   The invention relates to recombinant carcinoma associated (CA) nucleic
CC   acid sequences from mouse and human (ADA01482-ADA03094), and to
CC   recombinant carcinoma associated proteins (CAP) encoded by them. The
CC   invention also encompasses expression vectors and host cells comprising a
CC   CA nucleic acid, a polypeptide (especially an antibody) that specifically
CC   binds to the protein, and a biochip comprising CA nucleic acid or
CC   fragments thereof. The sequences of the invention were identified using
CC   oncogenic retroviruses, which insert into the genome of the host organism
CC   at random. Many of these do not carry transduced host oncogenes or
CC   pathogenic trans-acting viral genes, meaning that cancer incidence is a
CC   direct consequence of the effects of proviral integration into host
CC   protooncogenes. The CA nucleic acid sequences can be used to diagnose
CC   carcinoma (especially breast cancer, prostate cancer, lymphoma or
CC   leukaemia) or a propensity to carcinoma by determination of the sequence
CC   of a CA gene, or by determination of CA gene expression in particular
CC   tissues. CA nucleic acids, proteins and antibodies are also useful as
CC   therapeutic agents and in screening and evaluating drug candidates. The
CC   present sequence represents a specifically claimed human CA nucleic acid
CC   sequence of the invention. Note: The complete sequence data for this
CC   patent did not form part of the printed specification, but was obtained
CC   in electronic format directly from WIPO at
CC   ftp.wipo.int/pub/published_pct_sequences.

PT   New recombinant nucleic acid, useful for treating carcinomas, lymphomas,
PT   cancers, neoplasm, adenocarcinoma, or sarcomas.
XX
PS   Claim 1; SEQ ID NO 292; 2304pp; English.
XX
CC   The invention relates to a novel recombinant nucleic acid comprising a
CC   nucleotide sequence selected from any of the 660 sequences fully defined
CC   in the specification. A polynucleotide of the invention has cytostatic
CC   activity, and may have a use in gene therapy, or in a vaccine. The
CC   recombinant nucleic acids and polypeptides are useful for treating
CC   carcinomas, e.g. lymphomas, cancers, neoplasm, adenocarcinoma, and
CC   sarcomas. The present sequence represents a human gene of the invention.

XX
CC   The invention relates to an isolated nucleic acid comprising at least 10
CC   contiguous nucleotides of any of the 233 polynucleotide sequences given
```

CC in the specification, or its complement. The nucleic acids encode cancer-
CC associated proteins. Also included are an expression vector comprising
CC the isolated nucleic acid cited above, a host cell comprising the above
CC recombinant nucleic acid or expression vector, a microarray for detecting
CC a cancer-associated (CA) nucleic acid comprising at least one probe
CC comprising at least 10 contiguous nucleotides of any of the above-
CC mentioned nucleotide sequences, an isolated polypeptide (encoded within
CC an open reading frame of a CA sequence selected from any of the 95
CC polynucleotide sequences as mentioned in the specification, or its
CC complement), an isolated antibody, (or its antigen binding fragment) that
CC binds to the above polypeptide, a hybridoma that produces the above
CC monoclonal antibody, a pharmaceutical composition comprising the above
CC antibody and a pharmaceutical excipient, a kit for detecting cancer
CC cells(comprising the antibody cited above, methods for diagnosing cancer
CC or for detecting the presence or absence of cancer cells in an
CC individual, a method for inhibiting growth of cancer cells in an
CC individual, a method for delivering a therapeutic agent to cancer cells
CC in an individual, an electronic library comprising the above
CC polynucleotide or polypeptide (or their fragments), methods of screening
CC for anticancer activity or for a bioactive agent capable of modulating
CC the activity of a CA protein (CAP), methods for detecting cancer
CC associated with expression of a polypeptide in a test cell sample, a
CC method for treating cancers and a method for inhibiting the expression of
CC CA gene in a cell. The composition and methods are useful for detecting,
CC diagnosing, preventing and treating cancers, especially lymphoma and
CC leukaemia. These may also be used in screening for agents that modulate
CC cancer. The present sequence is a human CAP genomic sequence. Note: The
CC sequence data for this patent did not form part of the printed
CC specification, but was obtained in electronic format directly from WIPO
CC at ftp.wipo.int/pub/published_pct_sequences

PT Nucleic acid comprising fragment of chemically modified gene, useful for
PT diagnosis and treatment of diseases associated with abnormal cytosine
PT methylation.
XX
PS Claim 1; SEQ ID NO 1972; 32pp + Sequence Listing; German.
XX
CC The present invention provides a number of human immune system associated
CC genes which are modified by the methylation of cytosines. The sequences
CC can be used in the diagnosis and treatment of immune system disorders,
CC including eye diseases such as retinopathy, neovascular glaucoma and
CC macular degeneration, arteriosclerosis, anaemia, cancer, acute myeloid
CC leukaemia, Alzheimer's disease, AIDS, epilepsy, neurofibromatosis,
CC rheumatoid arthritis, psoriasis and inflammatory/ulcerative bowel
CC diseases. The present sequence is a gene of the invention

PT New recombinant nucleic acid encoding carcinoma associated protein,
PT useful for preparing compositions for treating carcinomas.
XX
PS Claim 1; SEQ ID NO 1448; 245pp; English.
XX
CC The invention relates to recombinant carcinoma associated (CA) nucleic
CC acid sequences from mouse and human (ADA01482-ADA03094), and to
CC recombinant carcinoma associated proteins (CAP) encoded by them. The
CC invention also encompasses expression vectors and host cells comprising a
CC CA nucleic acid, a polypeptide (especially an antibody) that specifically
CC binds to the protein, and a biochip comprising CA nucleic acid or
CC fragments thereof. The sequences of the invention were identified using
CC oncogenic retroviruses, which insert into the genome of the host organism
CC at random. Many of these do not carry transduced host oncogenes or
CC pathogenic trans-acting viral genes, meaning that cancer incidence is a
CC direct consequence of the effects of proviral integration into host
CC protooncogenes. The CA nucleic acid sequences can be used to diagnose
CC carcinoma (especially breast cancer, prostate cancer, lymphoma or
CC leukaemia) or a propensity to carcinoma by determination of the sequence
CC of a CA gene, or by determination of CA gene expression in particular
CC tissues. CA nucleic acids, proteins and antibodies are also useful as
CC therapeutic agents and in screening and evaluating drug candidates. The
CC present sequence represents a specifically claimed human CA nucleic acid
CC sequence of the invention. Note: The complete sequence data for this
CC patent did not form part of the printed specification, but was obtained
CC in electronic format directly from WIPO at
CC ftp.wipo.int/pub/published_pct_sequences.

PT   New recombinant nucleic acid, useful for treating carcinomas, lymphomas,
PT   cancers, neoplasm, adenocarcinoma, or sarcomas.
XX
PS   Claim 1; SEQ ID NO 496; 2304pp; English.
XX
CC   The invention relates to a novel recombinant nucleic acid comprising a
CC   nucleotide sequence selected from any of the 660 sequences fully defined
CC   in the specification. A polynucleotide of the invention has cytostatic
CC   activity, and may have a use in gene therapy, or in a vaccine. The
CC   recombinant nucleic acids and polypeptides are useful for treating
CC   carcinomas, e.g. lymphomas, cancers, neoplasm, adenocarcinoma, and
CC   sarcomas. The present sequence represents a human gene of the invention.

PT   New carcinoma associated gene or protein, useful for preparing a
PT   composition for diagnosing or treating carcinoma e.g., leukemia or
PT   lymphoma.
XX
PS   Claim 1; SEQ ID NO 196; 29pp; English.
XX
CC   The invention relates to new recombinant nucleic acids. The invention
CC   also relates to a host cell comprising a recombinant nucleic acid or
CC   expression vector, an expression vector comprising a recombinant nucleic
CC   acid, a recombinant protein, a method of screening for drug candidates, a
CC   method of screening for a bioactive agent capable of binding to a
CC   carcinoma associated protein (CAP) encoded by a nucleotide sequence, a
CC   method of screening for a bioactive agent capable of modulating the
CC   activity of a CAP, a method of evaluating the effect of a candidate
CC   carcinoma drug, a method of diagnosing carcinoma, a method for inhibiting
CC   the activity of a CAP, a method of treating carcinomas, a method of
CC   neutralising the effect of a CAP and a method of diagnosing carcinoma or
CC   propensity to carcinoma. A method of evaluating the effect of a candidate
CC   carcinoma drug comprises administering the drug to a patient, removing a
CC   cell sample from the patient and determining alterations in the
CC   expression or activation of a gene comprising the nucleotide sequence. A
CC   method of diagnosing carcinoma comprises determining the expression of
CC   one or more genes comprising the nucleic acid sequence in a first tissue
CC   type of a first individual and comparing the expression of the gene from
CC   a second normal tissue type from the first individual or a second
CC   unaffected individual, where a difference in the expression indicates
CC   that the first individual has carcinoma. A method of inhibiting the
CC   activity of a CAP comprises binding an inhibitor to the CAP. Treating
CC   carcinomas comprises administering to a patient an inhibitor of CAP.
CC   Neutralising the effect of a CAP comprises contacting an agent specific
CC   for the CAP. The polypeptide specifically binds to the protein encoded by
CC   the nucleic acid. It comprises an antibody that specifically binds to the
CC   protein encoded by the nucleic acid. The nucleic acids are useful for
CC   preparing a composition for diagnosing or treating carcinoma e.g.,
CC   leukaemia or lymphoma. This sequence represents a human carcinoma
CC   associated (CA) nucleic acid of the invention. Note: The sequence data
CC   for this patent did not form part of the printed specification but was
CC   obtained in electronic format directly from USPTO at
CC   seqdata.uspto.gov/sequence.html.

XX
CC The invention relates to a novel polynucleotide encoding a guanosine
CC triphosphate-binding protein coupled receptor (GPCR). A polynucleotide of
CC the invention may have a use in gene therapy. The polynucleotide and
CC polypeptide are useful for preparing a composition for treating a patient
CC in need of increased or suppressed activity or expression of the
CC guanosine triphosphate-binding protein coupled receptor. The
CC polynucleotide sequences shown in ADC85548-ADC87616 encode GPCR's of the
CC invention.
